ANNOUNCEMENT

VIth International Ephemeroptera Conference (24–28 July 1989)	Xth International Symposium on Plecoptera (27–31 July 1989)

in
Granada, Spain.

The Ephemeroptera conference will commence on 24 July 1989. However, if many proposed presentations are received after the first announcement the start could be advanced a day and finish on 28 July 1989. The Plecoptera Symposium will commence on 27 July 1989 and finish on 31 July 1989. Both meetings will overlap in a joint symposium on "Applied Aspects in the Study of Stoneflies and Mayflies" (27 July) and a one-day field trip to collecting sites in the Sierra Nevada Mountains (28 July).

The dates have been arranged close to the XXIVth Congress of the International Association of Theoretical and Applied Limnology at Munich, Germany,(13–19 August).

Each meeting will be sufficiently distinct, so that everyone has the choice to participate in either or both, and leave after the first is over or come only for the second.

Granada is a monumental city set in the foothills of the Sierra Nevada Mountains. It is world famous for its Arabic castle ("The Alhambra") and its beautiful gardens and surroundings ("The Generalife"). It has one of the oldest universities in Spain.

The activities are intended to be held in a university students residence built during the XVIth century where reasonably priced accomodations can be provided.

Optional extended post-meeting tours will be offered.

For additional information, please contact the convenor.
