Addenda to "New taxa of blues from Tian-Shan"

(Lepidoptera, Lycaenidae)
by
Sergei Churkin & Alexander Zhdanko
received 17.IX.2009

The article "New taxa of blues from Tian-Shan (Lepidoptera, Lycaenidae)" was published in Atalanta 39 (1-4): 297-309, colour plates 2-3. Unfortunately, a technical mistake was made by the editor: the description of "Agrodiaetus phyllides urumbash subspec. nov." (page 297) lost part of the text with all paratypes of this taxon. Only the holotype σ is mentioned, although it is clear after the description, that the authors had at their disposal a long series of the new subspecies. Moreover, the \circ paratype is figured in the colour plate together with the holotype σ .

We are publishing here the missing part of the text:

Paratypes: $1\ \sigma$, $2\ \%$, same data; $1\ \sigma$, $1\ \%$, same loc., $1300\ m$, 14.VI.2006, S. Churkin leg.; $1\ \sigma$, Kyrgyzstan, Tian-Shan, Kazarman vic., 20.V.2005; $1\ \sigma$, $2\ \%$, Kyrgyzstan, Tian-Shan, Moldo-Too Range, $50\ km$ NEE Kazarman, $2000-2100\ m$, 11-13.06.2006, S. Churkin leg., $32\ \sigma\sigma$, $9\ \%$, Kyrgyzstan, Tian-Shan, Fergansky Mts. (eastern edges), Urum-Bash R., $1600\ m$, 15.VI.2006, S. Churkin, V. Pletnev & S. Saluk leg.

As it was marked in the original description, the holotype is deposited in the Darwin State University (Moscow) while the paratypes are in the authors' collections.
