

BRAUERIA 19

May 1992

Dear Trichopterologist,

In a few months we meet again at our traditional symposium, this year in Umea, Sweden. Please find enclosed some information.

BRAUERIA in its new look has been well received. Many colleagues have paid in advance for several years or donated considerable voluntary contributions (one of them has given no less than 1000 Dollars !). So the continuation for the next few years is safe.

On the other hand, the expected orders from institutes and libraries did not materialize. In earlier years there were complaints that the Newsletter was not present in many libraries. Now there is no reason not to order it. The price of about five cups of coffee per year is probably not too high for even a poor Institute ! This may be said also for individuals in rich countries. BRAUERIA may be obtained free in exchange for trichopterological papers. Those who have no publications and cannot afford to pay should at least return the order form. If the form is not returned, their interest cannot be very high. Those who have not responded will get nothing. The number of printed copies can therefore be reduced to save costs.

I asked for either cash or Eurocheques, with good reason. Some colleagues have sent cheques, not Eurocheques, in other currencies to the value of ATS 100. For these the bank deducts 40 + 40 + 20 which means that for such a cheque I get exactly nothing. If you are not able to send cash or Eurocheques, please add 100 ATS or 10 \$ per cheque for bank charges. Please make out Eurocheques in Austrian currency.

A note to colleagues who are exchanging reprints with me. I am sending automatically my reprints of papers which I think would be of interest to them. If you want any other papers, please let me know. The complete list of my papers on Trichoptera may be found in the literature list in BRAUERIA.

In July and August and in October last year I made two trips to Greece to complete the faunistic survey. During the October trip it turned out that Chaetopterygini (4 species) were widespread in almost all of the mountain regions of the mainland, and were common in many places. Also, I found a second species of Apataniana and a new Potamophylax close to winneguthi. I will now compile the Trichoptera part of "Fauna Graeciae" and would very much appreciate any additional information or material from Greece.

In February and March this year I was in Thailand continuing my caddis field research with Dr. Chantaramongkol. With progress in taxonomy (about 3/4 of the species are new and must first be described), the ecological studies are well advanced.

See you soon in Sweden !

Yours sincerely,
