The Spanish Pimplinae of the Zoologische Staatssammlung München

(Hymenoptera, Ichneumonidae)

JORGE ANENTO & JESÚS SELFA

Abstract

The Spanish members of the subfamily Pimplinae in the collection of the Zoologische Staatssammlung München were investigated. Here, a list of 5 tribes, 17 genera and 21 species from the collection is given. The genera *Oxyrrhexis* FOERSTER, 1869 and the species *Acrodactyla madida* (HALIDAY, 1838), *Oxyrrhexis carbonator carbonator* (GRAVENHORST, 1807), and *Polysphincta rufipes* GRAVENHORST, 1829 are recorded for the first time from Spain.

Introduction

The Hymenoptera collection of the Zoologische Staatssammlung München (Germany) contains Spanish species of the subfamily Pimplinae. The greater part of the collection has now been studied (11 females and 2 males were on loan and must be considered lost), and 21 species in 17 genera and 5 tribes have been identified.

Some of the taxa identified have not been listed in previous works from the area (REY DEL CASTILLO 1994), and it is now possible to establish new records for the Spanish fauna.

For each species listed, data is taken from the original label. Where the province (and the Insular place) for each locality was absent from the label, it has been added in parentheses.
