

Berichtigung

Durch einen Druckfehler in der letzten Ausgabe der Koleopterologischen Rundschau wurde die Bestimmungstabelle der europäischen *Cidnopus* Arten in der Arbeit von CATE & PLATIA (Koleopt. Rdsch. 59: 185 - 188) nur unvollständig gedruckt. Die Tabelle wird nun in der vollen Länge wiedergegeben.

Key to the known species of *Cidnopus* THOMSON from Europe

- | | | |
|---|--|---|
| 1 | Pronotum very convex, sharply sloping on sides, with lateral margin invisible or partially visible in dorsal view | 2 |
| - | Pronotum slightly convex, gradually sloping on sides, with all lateral margin visible in dorsal view | 5 |
| 2 | Elytra clearly wider at base than pronotum | 3 |
| - | Elytra about as wide at base as pronotum | 4 |
| 3 | Punctures of pronotum smaller, separated by a distance equal to less than half their own diameters on disc, interspaces smooth and shiny. South Slowakia, Bulgaria (see PENEV and TARNAWSKI, 1987) | <i>ruzenae</i> (LAIBNER) |
| - | Punctures of pronotum larger, nearly contiguous on disc, interspaces with dull appearance, sometimes rugose. Europe, Siberia | <i>aeruginosus</i> (OLIVIER) |
| 4 | Third segment of antenna in the male triangular (female unknown). North Greece | <i>macedonicus</i> n. sp. |
| - | Third segment of antenna with sides subparallel in both sexes. Italy, Spain, Yugoslavia (Macedonia) | <i>pseudopilosus</i> PLATIA and GUDENZI |
| 5 | Second segment of antenna just longer than wide. European and Asiatic Turkey. | <i>crassipes</i> (SCHWARZ) |
| - | Second segment of antenna clearly longer than wide. Europe, Asia Minor, Caucasus | <i>pilosus</i> (LESKE) |
