DISTRIBUTION MAPS

to P.H. DAVIS, "FLORA OF TURKEY , 1-10"

Josef DONNER, Linz

Contents:	Page
Introduction	... 2
List of families and genera in alphabetical order	... 5
Distribution maps	... '19
Bibliography	... 126

Introduction

This work was carried out from the wish to put a straightforward catalogue of identifiable plant types in Turkey, at the disposal of botanists active in this field and at the same time to give information about the regional distribution. It is based upon the standard publication by P.H.DAVIS, "Flora of Turkey and the East Aegean Islands" volumes 1 - 10. Consequently, the distribution maps are only to be understood as an abridged version of the standard work and are also to be used in this way. Additional information of distribution which has since become known to me and recently described species and subspecies, including information on place of origin, will be referred to as best as possible.

The family and genus index provides an easy reference source. The names are ordered alphabetically and the relevant page number is indicated behind the name of each family and genus. At present 10.436 species or subspecies from 176 families including 1242 genera are dealt with.

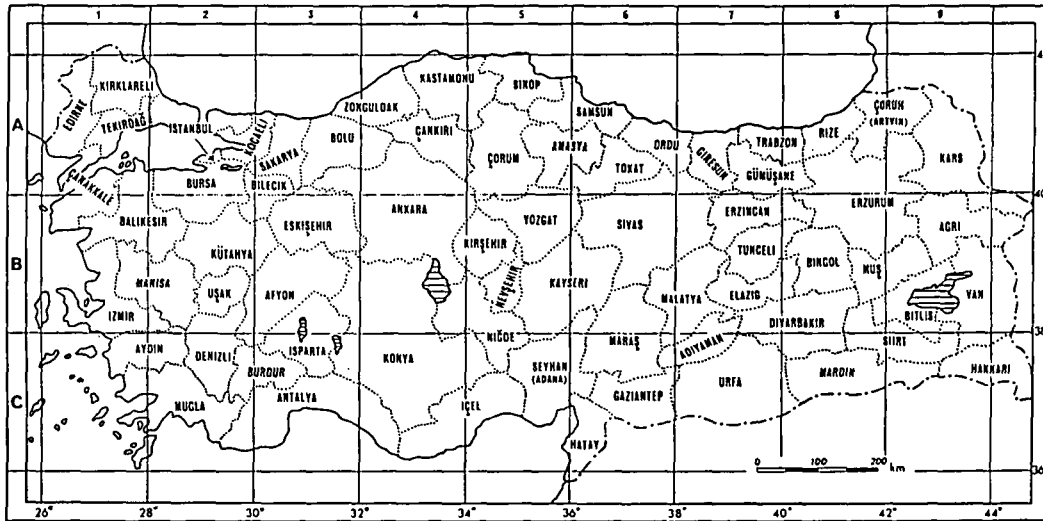

The distribution maps of the species and subspecies are structured in accordance with DAVIS; hybrids being included, only, if cited under a particular name of species. The alphabetical structure of the family names will be kept separate, at times, from the groups Pteridophyta, Gymnospermae, Dicotyledones and Monocotyledones. Likewise, with each family, the genus as well as species and subspecies names are alphabetically ordered. In so far that subspecies are identified in Turkey, the nominate form is indicated first.

Distribution details are based on the grid pattern as used by DAVIS with a lateral length of 2 degrees and with the letters A,B,C designating north-south location and the numbers 1 - 10 designating east-west location (see fig. 1 on page 4).

The following symbols will be used:

-  cited proof for the appropriate grid panel;
-  cited only for the islands mentioned by DAVIS;
-  the place of discovery cannot be clearly located;
-  this species is cultivated in Turkey;
-  this species is found as an escape, introduced or cultivated in the appropriate grid panel;
-  this species is endemic only for Turkey;
-  an addition to this species can be found in the Herbarium of Dr.F.SORGER, Vienna.

The bibliography includes every publication that is known to me and from which information for the distribution maps has been taken.

Turkish Vilayets and Grid system
