M. KESDEK & E. YILDIRIM

A b s t r a c t : This study bases on material collected from different localities of Turkey, between 1969-2003. 12 species and subspecies belonging to five genera in the tribe Platynini are recorded. Among them, *Calathus syriacus* CHADOIR 1863 and *Calathus ambiguus* (PAYKULL 1790) were the most abundant and widespread species. However, *Calathus ambiguus dilutus* CHADOUR 1842, *Calathus erythroderus* GEMMINGER & HAROLD 1868, *Dolichus halensis* (SCHALLER 1783) and *Sphodrus leucophthalmus* (LINNEAUS 1758) are new records for the Turkish fauna. Separately, synonym and distribution of these species were given in this study.

K e y w o r d s : Coleoptera, Carabidae, Platynini, Fauna, Turkey.
