Distributional checklist of the species of genus *Omophlus* (Insecta: Coleoptera; Alleculidae; Omopliinae) of Turkey

E. YILDIRIM & E. KILIÇ

Abstract: A distributional checklist of all the species in the genus *Omophlus* (Coleoptera; Alleculidae) recorded from Turkey is presented. A total of 41 species and subspecies belonging to four subgenera (*Odontomophlus*, *Omoplus*, *Paromophlus*, *Paurodontomophlus*) are recognized to have been recorded from Turkey.

Key words: Coleoptera, Alleculidae, Omopliinae *Omophlus*, checklist, distribution, Turkey.

Introduction

Turkey is one of the most interesting countries from the view points of genus *Omophlus* taxonomy and biogeography, not only because *Omophlus* distributed there comprise all four subgenera (*Odontomophlus*, *Omoplus*, *Paromophlus*, *Paurodontomophlus*) occurring in the Palaearctic region, but also because the Turkish *Omophlus* fauna includes Middle-Asian, Caucasus and European species. Although many faunistic and taxonomic studies on the Turkish species of the *Omophlus* have been conducted, no attempt has been made to compile a checklist of the *Omophlus* species distributed in Turkey. Such a checklist many greatly aid entomologists to carry out further studies on taxonomy, biogeography and phylogeny of the Turkish as well as Palearctic *Omophlus*.

The present checklist includes all the species names of the *Omophlus* so far recorded from Turkey; 41 species and subspecies belonging to four subgenera.
