***Hilara leandrina* STROBL, 1910: an overlooked replacement name for *Hilara czernyi* STROBL, 1910 (currently *Hilara borealis* OLDENBERG, 1916)**

(Diptera: Empididae)

Nikola-Michael PRPIĆ

Abstract

Hilara czernyi, described by STROBL (1910a) from Austria, is a junior homonym of *Hilara czernyi* STROBL, 1909, (in CZERNY & STROBL 1909), from Spain. OLDENBERG (1916) has proposed the replacement name *Hilara borealis*, but has overlooked the older replacement name *Hilara leandrina* proposed by STROBL himself. The valid name therefore is *Hilara leandrina* STROBL, 1910, not *Hilara borealis* OLDENBERG, 1916, (**syn. nov.**).

The genus *Hilara* is one of the most species-rich taxa in the family Empididae (dance flies, dagger flies and balloon flies). In Germany the genus comprises more than 100 described species. In contrast to other species-rich groups of Empididae like the genera *Empis* and *Rhamphomyia*, the members of *Hilara* are morphologically very similar and provide only few characters to separate the species. They are therefore regarded as the taxonomically most difficult group of Empididae (CHVALA 2005).

I report here on the nomenclature of the *Hilara* species currently known as *Hilara borealis* OLDENBERG, 1916. This species has originally been described by STROBL (1910a) as *Hilara czernyi*. STROBL based his new species on 1 female and 2 male specimens collected at mountain streams near Admont in the Styrian Alps (Austria). However, STROBL did not notice that in 1909 he had already used the name *Hilara czernyi* for another *Hilara* species from Spain (CZERNY & STROBL 1909). Thus, the name *Hilara czernyi* STROBL, 1910 is a junior primary homonym of *Hilara czernyi* STROBL (in CZERNY et STROBL), 1909. OLDENBERG (1916) therefore published a replacement name, *Hilara borealis*. This name is currently used as the valid name for the species. However, it has been overlooked by OLDENBERG and all subsequent authors that STROBL himself has realized that he had used the same name twice for two different species, and that STROBL has actually published a „Berichtigung“ („correction“) to his paper that has been included as an unpaginated page between the pages 293 and 294 in the journal „Mitteilungen des Naturwissenschaftlichen Vereins für Steiermark“ (STROBL 1910b). The text of this correction reads as follows: „Der Name (*Hilara*) *Czernyi* m. in diesen Mitteilungen 1910, p. 69 muß in *Leandrina* m. umgeändert werden, da ich überschien hatte, dass ich bereits 1909 in „Spanische Dipteren“, III. Teil (zool.-bot. Ges. p. 176), aus Algeciras eine *H. Czernyi* beschrieben hatte“ (translation: „The name (*Hilara*) *Czernyi* m. in the present Proceedings 1910, p. 69. has to be replaced by *Leandrina* m., because I overlooked that I had already described a *H. Czernyi* from Algeciras in the „Spanische Dipteren“, III. part (zool.-bot. Ges. p. 176) in 1909“). The replacement name by STROBL has been published before the replacement name by OLDENBERG and therefore has priority over the name by OLDENBERG. Therefore, the valid name of the species originally described as *Hilara czernyi* STROBL, 1910, is *Hilara leandrina* STROBL, 1910, not *Hilara borealis* OLDENBERG, 1916.

Note that OLDENBERG (1916) not only replaced the homonymous name, but he also broadened the concept of *Hilara borealis* to include not only the Alpine populations previously named *Hilara czernyi*, but also Fennoscandian populations that were at the time still unnamed. CHVALA (2002) showed that these Fennoscandian populations are actually not conspecific with the Alpine populations and constitute a separate species that he named *Hilara lapponica*. Although OLDENBERG

(1916) erroneously considered his *Hilara borealis* to comprise both the Alpine and the Fennoscandian populations, he proposed the name clearly as a new replacement name for *Hilara czernyi* STROBL, 1910, and thus the types of *Hilara borealis* are automatically those of *Hilara czernyi* STROBL, 1910 (International Code of Zoological Nomenclature Article 67.8., Article 72.7. (International Commission on Zoological Nomenclature 1999)). Despite OLDENBERG's broadened concept of *Hilara borealis*, the name *Hilara borealis* is therefore unequivocally fixed to the Alpine populations, and OLDENBERG's use of the name *Hilara borealis* also for the Fennoscandian populations must therefore be formally considered as a misidentification.

As an overview I give below the full synonymy of these two species of *Hilara*:

Hilara leandrina STROBL, 1910

Hilara czernyi STROBL, 1910a:69 (nec *Hilara czernyi* STROBL (in CZERNY et STROBL), 1909:176)

(junior primary homonym)

Hilara leandrina STROBL, 1910b:unpaginated (new replacement name for *Hilara czernyi* STROBL, 1910a:69)

Hilara borealis OLDENBERG, 1916:172 **syn. nov.** (unnecessary new replacement name for *Hilara czernyi* STROBL, 1910a:69)

Hilara lapponica CHVALA, 2002

Hilara borealis auct. nec OLDENBERG, 1916:172 (misidentification)

Hilara lapponica CHVALA, 2002:69

Zusammenfassung

Der Name der von STROBL (1910a) aus Österreich beschriebenen *Hilara czernyi* ist ein jüngeres Homonym von *Hilara czernyi* STROBL, 1909, aus Spanien. OLDENBERG (1916) hat daher den Ersatznamen *Hilara borealis* vorgeschlagen, hat dabei aber übersehen, dass STROBL selbst die Homonymie bereits erkannt und den Ersatznamen *Hilara leandrina* vorgeschlagen hatte. Der gültige Name der Art ist daher nicht *Hilara borealis* OLDENBERG, 1916 (**syn. nov.**), sondern *Hilara leandrina* STROBL, 1910.
