

V o r t r a g.

Eigene Bewegungen von Fixsternen, abgeleitet aus der Vergleichung der Histoire céleste mit den Argelander'schen nördlichen Zonen.

Von Wilhelm Oeltzen,

Assistenten der k. k. Sternwarte zu Wien.

Die bis jetzt bekannten eigenen Bewegungen der Fixsterne sind entweder zufällig aufgefunden, wenn Sternörter verschiedener Epochen behufs anderer Untersuchungen auf ein und dieselbe Lage der Fundamentebenen zurückgeführt wurden, oder durch eine absichtlich zu diesem Zwecke unternommene Vergleichung eines Fixsternkataloges mit einem andern von entlegener Epoche. Vornehmlich sind dazu diejenigen Kataloge benutzt, in denen jede einzelne Position das Resultat wiederholter Messungen ist, die daher im Allgemeinen eine grössere Genauigkeit darbieten, als die aus Zonen-Beobachtungen abgeleiteten, meist nur einmalige Bestimmungen enthaltenden Kataloge. Dennoch ist zu erwarten, dass auch die Vergleichung zweier solcher Beobachtungsreihen die Liste der beweglichen Sterne vergrössern wird. In diesem Sinne habe ich versucht, die Beobachtungen der *Histoire céleste française* mit den nördlichen Zonen-Beobachtungen von Argelander zu vergleichen und zunächst alle diejenigen Sterne ausgewählt, welche sich ausserdem nicht weiter beobachtet finden.

Die Reduction von 1800 auf 1842 ist nach den Formeln

$$\frac{42m}{15} + \frac{42n}{15} \sin \alpha \operatorname{tg} \delta \text{ für Rectascension}$$

und $42n \cos \alpha$ für Declination berechnet, wo α und δ für die Mitte der beiden Epochen gilt, und

$$\frac{42m}{15} = 2^m 8^s 94, \lg \frac{42n}{15} = 1 \cdot 74943, \lg 42n = 2 \cdot 92553 \text{ ist.}$$

Das nachfolgende Verzeichniss von etwa 1700 Sternen enthält die Grösse nach Argelander's Angabe, dann die mit den obigen Formeln auf $1842 \cdot 0$ reducierten Lalande'schen Sternörter. Ferner die Differenzen, welche hervorgehen, wenn diese reducierten Örter von den Angaben des Argelander'schen Zonen-Kataloges subtrahirt

werden und endlich die Numer des Lalande'schen Kataloges. Bei mehrfachen Beobachtungen desselben Sternes ist das Mittel aus allen genommen.

Die als Unterschiede der beiden Kataloge zum Vorschein kommenden Werthe sind als eigene Bewegung in dem Zeitraume von etwa + 50 Jahren anzusehen, insofern man die Beobachtungen selbst und die Präcessionsconstanten als fehlerfrei voraussetzt. In den meisten Fällen grösserer Unterschiede wird es einer neueren Bestimmung bedürfen, um das Vorhandensein einer Bewegung oder eines Fehlers zu constatiren. Einige der grösseren Bewegungen haben sich durch Bestimmungen am hiesigen Meridiankreise vollkommen bestätigt.

Was die kleineren Unterschiede betrifft, so habe ich eine Anzahl von Declinationsdifferenzen mit Weglassung aller 10°0 übersteigenden, als nur von den unvermeidlichen Beobachtungsfehlern herrührend, behandelt und aus der Summe der Quadrate die wahrscheinliche Differenz zwischen einer Lalande'schen und Argelander'schen Declination gefunden:

$$\text{aus } 150 \text{ Sternen von } 0^{\text{h}} 0^{\text{m}} \text{ bis } 1^{\text{h}} 19^{\text{m}} = 0.6749 \sqrt{\frac{2007.76}{150}} = 2^{\circ}468,$$

$$\text{„ } 150 \text{ „ „ } 6^{\text{h}} 0^{\text{m}} \text{ „ } 9^{\text{h}} 1^{\text{m}} = 0.6749 \sqrt{\frac{2213.45}{150}} = 2^{\circ}591,$$

$$\text{„ } 150 \text{ „ „ } 12^{\text{h}} 0^{\text{m}} \text{ „ } 17^{\text{h}} 15^{\text{m}} = 0.6749 \sqrt{\frac{2760.26}{150}} = 2^{\circ}893$$

aus allen 450 Sternen = 2°657.

Der wahrscheinliche Unterschied ergibt sich aber auch aus der Combination der den beiden Beobachtungsreihen zugehörenden wahrscheinlichen Fehler.

Der wahrscheinliche Fehler einer Lalande'schen Declination ist von Lindhagen (Astron. Nachr., Bd. 28, S. 136) = 2°017 gefunden, wobei 15°0 als Grenze genommen war, von Fedorenko (*Positions moyennes etc. pag. XXII*) mit der Grenze von 10°0 = 1°917. Argelander gibt den wahrscheinlichen Fehler einer Declination = 1°030 an. Mit dem Werthe 1°917 findet sich nun der wahrscheinliche Fehler eines Unterschiedes zwischen einer Lalande'schen und Argelander'schen Declination = $\sqrt{1.917^2 + 1.030^2} = 2^{\circ}176$, also entschieden kleiner, als die oben gefundenen Werthe, so dass diesen noch andere Ursachen zu Grunde liegen müssen als die reinen Beobachtungsfehler.

B e m e r k u n g e n .

Lat. Nr.

3987. Die Unterschiede sind ohne Zweifel Folge der eigenen Bewegung.
Es folgt nämlich
der Ort 1800 aus Lalande $1^h 59^m 33\frac{1}{4}^s + 66^\circ 44' 39\frac{3}{4}''$
aus Argel. $59^h 37\cdot81^m$ $24\cdot8$
aus einer Wien. M. B. v. 1853 $59^h 38\cdot43^m$ —
4655. Eine Wiener M. B. von 1853 gibt die Rectascension $1842 = 2^h 23^m 14\frac{1}{2}^s$,
der Stern scheint danach eigene Bewegung zu haben.
5490. Nenere Beobachtungen bestätigen die bedeutende eigene Bewegung.
Es ist nämlich
der Ort 1842 aus Lalande $2^h 51^m 11\frac{1}{2}^s + 61^\circ 7' 0\frac{1}{2}''$
aus Argel. 3363 $51^h 16\cdot98^m$ $6\cdot27\cdot2$
aus zwei Wien. M. B. v. 1853 $9^h 51^m 18\cdot05^s$ $6\cdot20\cdot6$
6024. Der grosse Unterschied der Declination scheint von einem Fehler
von $30''$ bei Lalande herzuröhren, da eine Wiener M. B. von 1853 die
Declination $1\frac{1}{2}'$ grösser als Argel. gibt.
6110. Eine Wiener M. B. von 1853 gibt für $142^h 11^m 15\frac{1}{2}^s + 60^\circ 58' 3\frac{1}{2}''$.
6787. Der starke Unterschied in Declination scheint von einem Fehler von $30''$
bei Lalande herzuröhren, da eine Wiener M. B. von 1853 die Declination
 $1\frac{1}{2}'$ kleiner als Argelander.
7036. Dieser Stern scheint eine eigene Bewegung zu haben. Es folgt nämlich
der Ort 1800 aus Lalande $3^h 37^m 56\frac{1}{2}^s + 60^\circ 34' 3\frac{1}{2}''$
aus Argel. 4215 u. 4216 $37^h 59\cdot53^m$ $33^h 54\cdot0$
aus einer Wien. M. B. v. 1853 $37^h 59\cdot91^m$ $33^h 51\cdot7$
8953. Die Declination bei Lalande ist fehlerhaft.
9242. Der mittlere Ort 1800 folgt
aus Lal. $4^h 44^m 54\cdot91^s + 56^\circ 48' 54\frac{3}{4}''$
aus Argel. 5349 $44^h 57\cdot79^m$ $48\cdot51\cdot8$
aus einer Wiener M. B. v. 1853 $44^h 57\cdot98^m$ $48\cdot51\cdot4$
- 12381.) Der starke Unterschied der Declinationen hat seinen Grund in einem
12547.) Fehler in der Reductionstafel zu H. C. p. 366, 12. August. Die Z. D. des
letzten Sternes dieser Zone, der als einziger Fundamentalstern benutzt
ist, ist nämlich fehlerhaft, wahrscheinlich um $30''$.
13427. Der Stern scheint eine beträchtliche eigene Bewegung zu haben, da
die Unterschiede in beiden Coordinaten erheblich sind.
17350. Eine Wiener M. B. von 1853 gibt die Declination $2\frac{1}{2}'$ grösser als
Argelander.
18111. Über diesen Stern mit bedeutender Eigenbewegung siehe Astronom.
Nachrichten Nr. 880.
18722. Eine Wiener M. B. gibt die Declination $1\frac{1}{2}'$ grösser als Argelander.
19627. Der bedeutende Unterschied, der sowohl in Rectascension als Declination
stattfindet, scheint eine eigene Bewegung anzudeuten.
21076. Lalande ist wohl um $30''$ falsch. Eine Wiener M. B. von 1853 gibt den
mittleren Ort $1842 = 10^h 50^m 32\frac{1}{4}^s + 44^\circ 39' 34''$.

Lat. Nr.

21379. Eine Wiener M. B. von 1853 gibt die Declination $1^{\circ}2'$ kleiner als Argelander.
22196. Eine Wiener M. B. von 1853 gibt die Declination $2^{\circ}2'$ grösser als Argelander, so dass Lalande wohl um $30''$ falsch ist.
22845. Die Zeit bei Lalande scheint fehlerhaft. Eine Wiener M. B. von 1853 gibt $0^{\circ}21'$ mehr als Argel.
29892. Die Declination bei Lalande ist fehlerhaft, da eine Wiener M. B. von 1853 $1^{\circ}0'$ mehr als Argel. gibt.
30699. Die Unterschiede röhren wohl von einer eigenen Bewegung her, da zwei Wiener M. B. von 1853, 5 als mittleren Ort 1842 ergeben $16^{\text{h}}\ 42^{\text{m}}\ 59^{\text{s}}.49 + 68^{\circ}\ 22' 31''.8$.
30966. Aus einer Wiener M. B. von 1853 folgt die Declination $2^{\circ}6'$ grösser als aus Argel.
32512. Die Declination bei Lalande scheint fehlerhaft zu sein, da eine Wiener M. B. von 1853 $0^{\circ}8'$ mehr gibt als Argel.
32663. Die Zeit bei Argel. scheint fehlerhaft, da eine Wiener M. B. von 1853 als mittleren Ort 1842 ergibt $17^{\text{h}}\ 42^{\text{m}}\ 35^{\text{s}}.38 + 60^{\circ}\ 38' 19''.2$.
33698. Die Lalande'sche Declination ist wohl um $30''$ fehlerhaft.
34246. Die Lalande'sche Declination ist fehlerhaft.
34913. Die Zeit bei Lalande scheint 5^{s} zu gross zu sein ; eine Wiener M. B. von 1853 gibt $0^{\circ}14'$ weniger als Argelander.
37777. Eine Wiener M. B. von 1853 gibt $2^{\circ}9'$ weniger als Argelander, danach scheint Lalande um $30''$ falsch zu sein.
41377. Die Declination bei Lalande ist wahrscheinlich um $30''$ falsch.
42177. Eine Wiener M. B. gibt die Declination $0^{\circ}2'$ südlicher als Argelander, so dass Lalande wohl um $30''$ falsch ist.
42764. } Die Zeit ist nur von Nr. 42774 genommen, da die erstere Numer
42774. } beträchtlich abweicht.
43376. Die P. D. von Nr. 43377 weicht $15^{\text{s}}.4$ ab von Nr. 43376 und ist wohl um $15''$ falsch, da nur Nr. 43376 mit Argel. übereinstimmt.
44114. } Die P. D. ist nur von Nr. 44114 genommen, indem die von Nr. 44115
44115. } wahrscheinlich um $30''$ zu klein ist.
45784. Die Zeit bei Lalande ist fehlerhaft.

In Betreff der grösseren bei Lalande und Argelander aufgefundenen Fehler muss ich auf das Maiheft 1854 dieser Sitzungsberichte und auf die Annalen der Wiener Sternwarte verweisen; in dem ersteren dieser Verzeichnisse sind noch folgende Berichtigungen vorzunehmen.

1727. In der letzten Zeile dieser Bemerkung ist zu lesen: $49^{\text{m}}\ 58^{\text{s}}.02$ statt $58^{\text{m}}.92$.
- 2972 muss heissen: $26^{\circ}\ 50'$ und nicht $40'$
9696. Die Bemerkung ist irrthümlich. Die Präcession im Kataloge muss aber heissen: $4^{\circ}.672$ statt $4^{\circ}.747$.
- 14612 muss heissen: $40^{\circ}\ 54'$ und nicht $44'$.
- 17743 muss heissen: $36^{\circ}\ 7'$ und nicht $35^{\circ}\ 57'$.
19139. Die Bemerkung ist irrthümlich. Die Rectascensionen stimmen bis auf $0^{\circ}8.$
