

wings with a small, rounded substigmal cloud at the base of the stigmal vein. Antennae 12-jointed with one very short ring-joint, the funicle 6., the club 3-jointed; scape clavate, compressed, there being a regular dilation toward apex but this is not enormous and fanshaped as in some genera; flagellum clavate, the funicle joints noticeably widening distad, the club thick and oval, only half the length of the funicle, the latter with the first two joints somewhat longer than wide, each somewhat shorter than the pedicel. Pubescence of antennae bristly. Club distinctly broader than the funicle.

Male: — Not known.

A genus allied with *Aenasius* Walker but the scape is much less dilated, the club much shorter in relation to the funicle and the mesonotum is scarcely punctate but densely reticulated in polygons. More similar to the North American *Aenasioidea* Girault but the head is more round, the frons is not punctured, the eye is longer than the malar space, the distal funicle joints wider, the post-marginal vein present and distinct, the scutum longer than the scutellum and the body metallic. Moreover, there is a ring joint in the antennae of the Australian genus.

Type: The following species (*A. brachyschelidis* new species). to be continued.

Zum Studium der Insekten-Parasiten.

Bei Beginn der Saison möchte ich unsere Leser bitten, mir die aus ihren Zuchten resultierenden Schmarotzer-Larven und Tönnchen, sowie die Tachinen und Ichneumoniden selbst zuzusenden unter genauer Angabe der Insekten, aus denen sie stammen und deren Provenienz. Sehr erwünscht sind mir auch die Daten des Schlüpfens. Denjenigen Herren, die mich schon seit mehreren Jahren mit solchen Sendungen bedacht haben, sage ich auch an dieser Stelle meinen Dank und hoffe ich auf ihre weitere Unterstützung.

M. Rühl.

57: 16. 9: 57

(Fortsetzung.)

Phaeogenes fulvitaris	Hyponomeuta cognatella
— plutellae	Plutella maculipennis
Philogaleria sextuberculata	Galleria mellonella
Philoponectroma pectinatus	Dactylopius sp.
Photoptera erythronota	Zaratha oramerella
Phygadeuon eudemidis	Polychrosis botrana
— laeiventris	Digonochaeta setipennis
— plesius	Tortrix fumiferana
Phycus testaceus	Mytilaspis pomorum
— varicornis	Aspidiotis uvae
Phytodietus coryphaeus	Calamia lutosa
— segmentator	Tortrix viridana
— vulgaris	Archips argyrospila

Phorocera erecta	Pachyzancla bipunctalis
Picroscopus ictericus	Monoctenus juniperi
Pimpla abdominalis	Epeira cornuta
— alternans	Abraxas grossulariata
— —	Asphondylia genistae
— —	Biorrhiza terminalis
— —	Coleophora currucipennella
— —	— giraudi
— —	Conchylis ambiguella
— —	Kaliosysphinga pumila
— —	Larentia juniperata
— —	Lithocolletis lortella
— —	Lophyrus pini
— —	Nematus pedunculi
— —	Oenophthira pilleriana
— —	Orchestes quercus
— —	Poecilostoma candidatum
— —	Polychrosis botrana
— —	Pontania viminalis
— —	Saperda populnea
— —	Yponomeuta padella
— —	Zygaena filipendulae
— angens	Artanes fallax
— —	Epeira sp.
— brassicariae	Lymantria monacha
— —	Polygonia c. album
— brevicornis	Anthonomus pomorum
— calobata	Argyresthia conjugella
— —	Tortrix viridana
— capulifera	Lymantria monacha
— cinetella	Conchylis ambiguella
— conquisitor	Archips argyrospila
— —	Malacosoma americana
— —	Tortrix fumiferana
— coxalis	Conchylis ambiguella
— detrita	Hydroecia micacea
— —	Polychrosis botrana
— disparis	Lymantria dispar
— examiner	Abraxas grossulariata
— —	Agrotis plecta
— —	Anthonomus pomorum
— —	Arctia cervini
— —	Cacoecia piceana
— —	Carcina quercana
— —	Cucullia argentea
— —	— artemisiae
— —	Cymatophora octogesima
— —	Dicranura vinula
— —	Euproctis chrysorrhoea
— —	Evetria buoliana
— —	Fumea casta
— —	Lasiocampa trifolii
— —	Malacosoma neustria
— —	Metriostola vacciniella
— —	Oeonistis quadra
— —	Oenophthira pilleriana
— —	Ornix turquilella
— —	Paelytelia unicolor
— —	Polychrosis botrana
— —	Psyche viciella
— —	Sesia scoliaeformis
