Hofrat Prof. Dr. Karl FRITSCH
(* 24.2.1864 in Wien, † 17.1.1934 in Graz)

Karl FRITSCH studierte nach einem Jahr in Innsbruck an der Universität Wien Botanik und wurde dort 1886 zum Dr.phil. promoviert; 1890 habilitierte er sich. Nach Anstellungen in Wien wurde FRITSCH 1900 als Professor für Systematische Botanik an die Universität Graz berufen, wo er aus bescheidenen Anfängen ein Institut aufbaute. 1910 wurde er Direktor des Botanischen Gartens, 1916 wurde das neu errichtete Institutsgebäude bezogen. Aus der sehr breiten wissenschaftlichen Tätigkeit sind vor allem drei Schwerpunkte hervorzuheben: Floristisch-systematische Studien, besonders zur Flora von Österreich, monographische Arbeiten (besonders über *Gesneriaceae*) und Arbeiten zur systematischen Stellung und Gliederung der Monocotylen. An Kryptogamen interessierten ihn besonders Pilze und Myxomyceten.

Die Serie FRITSCHIANA wurde als Publikationsorgan für die zahlreichen Aktivitäten im Zusammenhang mit der botanischen Sammlung des Institutes für Pflanzenwissenschaften, Bereich Systematische Botanik und Geobotanik (vormals Institut für Botanik), der Karl-Franzens-Universität Graz (GZU) gegründet. Vor allem Schedae-Hefte der von den Mitarbeitern herausgegebenen Exsiccatenwerke sollten hier erscheinen, aber auch Exkursionsberichte sowie Listen und Indices besonders wertvoller Bestände in GZU. Das Spektrum wurde mittlerweile auf floristische und kleinere taxonomische Arbeiten (zwischenzeitlich auch auf das Samentauschverzeichnis des Botanischen Gartens) ausgeweitet. Die Schedae-Hefte des von Prof. Dr. Josef POELT begründeten, inzwischen abgeschlossenen Exsiccatenwerkes *Plantae Graecenses* sind die Vorläufer dieser Schriftenreihe.

Additions and Corrections to the Checklist and Bibliography of Lichens and Lichenicolous Fungi of Insular Laurimacaronesia. IV.

Josef HAFELLNER

HAFELLNER J. 2008: Additions and corrections to the checklist and bibliography of lichens and lichenicolous fungi of insular Laurimacaronesia. IV. - *Fritschiana* 64: 1–28. – ISSN 1024-0306.

Abstract: Additional records of lichens and lichenicolous fungi for any one of the Laurimacaronesian archipelagos (Azores, Madeira group, Canary Islands) or the whole area are listed together with cross references to the original sources. Notes on several previously reported taxa are included. The new combination *Pseudosagedia leptospora* (Nyl.) Hafellner is proposed. This list is followed by additions to a lichenological bibliography for the area.

Zusammenfassung: In einer Liste werden weitere Nachweise von Flechten und lichenicolen Pilzen für einen der laurimakaronesischen Archipele (Azoren, Madeira, Kanarische Inseln) oder das gesamte Studiengebiet zusammen mit Kurzzitaten zu den Originalquellen zusammengestellt. Eingeschlossen sind Anmerkungen zu einigen früher gemeldeten Taxa. Die neue Kombination *Pseudosagedia leptospora* (Nyl.) Hafellner wird vorgeschlagen. Nachträge zur lichenologischen Bibliographie für das Gebiet bilden den zweiten Teil der Arbeit.

Introduction

Since the publication of a new lichen checklist for the Laurimacaronesian area (HAFELLNER 1995), three sets of additions and corrections have been compiled (HAFELLNER 1999, 2002, 2005). Since the publication of the last set of updates in 2005, many additional records and a number of corrections to previously reported species have appeared in the literature. The present paper represents a compilation of these most recent species reports with cross references to their original bibliographic sources. As in the previous updates, complete data sets are given. However, in cases where full references to citations were already listed in the previously published bibliographies (such as 'TAVARES 1952'), these are not repeated here being traceable by consulting the previous issues.

The supplement to the bibliography contains not only publications in which additional taxa are recorded but also further references containing supplementary chorological data for previously reported taxa.

Since 2005, more than 170 additional lichen taxa and over 30 further lichenicolous fungi have been added to the list of taxa known in the “insular Laurimacaronesian” study area. and many species have been found on archipelagos on which they were not previously known. This clearly shows that the compilation of the checklist has fulfilled its purpose in encouraging lichenologists to search for additional taxa. The Azores in particular have recently received special attention with the publication of several major additions.

Furthermore, since the publication of “Additions III” various authors have prepared checklists for individual archipelagos of Macaronesia. The checklist for the Canary Islands (HERNÁNDEZ-PADRÓN 2004) is an updated version of a precursor published in 2001 and listed in “Additions III”, while those for the other archipelagos are completely new: the Azores (FLORES RODRIGUES & APTROOT 2005), the Cape Verde Islands (SÁNCHEZ-PINTO & RODRÍGUEZ 2005), and Madeira plus Selvagens (CARVALHO et al. 2008b). Checklist data are also available on the Internet. In addition to the datasets for each archipelago housed on the server in Hamburg (FEUERER 2008), a databank was recently launched for the Azores (GABRIEL 2008).

A new version of the checklist is in preparation which will again make it easier to check which taxa occur on which archipelago.

As in the past, colleagues are kindly asked and invited to send copies of hitherto overlooked articles containing data on lichens or lichenicolous fungi from insular Macaronesia to the author.
