

Dr. Martin Baehr

(*10.3.1943, †17.4.2019)

Obituary honouring his scientific achievements

Angela Pillukat & Roland R. Melzer

There is no doubt that Dr. Martin Baehr was one of the great masters of beetle taxonomy of the past 50 years. His oeuvre is outstanding, in 384 publications Martin described 2098 new species and subspecies to-

gether with 76 higher ranked taxa. These covered not only his beloved Carabidae, but also Onychophora, Araneae, Orthoptera, and Heteroptera. However, his main focus was the Carabidae of Australia which he

described and revised on thousands of pages after travelling thousands of kilometres on his collection trips and spending many more thousands of hours at the microscope.

Between 1994 and 2008, Dr. Martin Baehr was curator of Coleoptera at the Bavarian State Collection of Zoology in Munich and has been managing editor of our house journal "Spixiana". We have thus decided to dedicate Martin a very special kind of obituary, one consisting of the basic data of his oeuvre, viz., a bibliography (page 2) and a list of taxa described by him (page 16). Moreover, Martin had finished and submitted three more manuscripts including new species of genus *Speotarus* Moore and *Sphallomorpha* Westwood, as well as the description of a new tachyine genus for publication. These are also published in this issue of "Spixiana" (pp. 37, 43 and 49).

Martin had not only encyclopaedic knowledge about insects, but also about German literature and language, and classical music. He was a hard-working, very disciplined man of great intelligence, with an unbeatable drive to study species, and outstanding empathy for taxonomy – the core of the science of animals. The result of this combination of character traits, Martin Baehr's very peculiar "set of characters", can maybe best be assessed with a little calculation: He described 2173 new taxa in about 40 working years. In other words, he described more than 50 taxa per year, which equals ca 1 per week.

Whoever is interested in learning more about Martin Baehr's life will find a lot of details in the classical obituary honouring Martin's lifetime achievements by E.-G. Burmeister (2019).
