Biostratigraphy and facies of Paleogene deep-water deposits at Gams (Gosau Group, Austria)

By Hans Egger¹, Fred RögL² & Michael WAGREICH³

In: Ann. Naturhist. Mus. Wien, 106A: 281–307. – Wien, November 2004

In the last volume of the *Annalen* the above cited version of EGGER et al. was published. Due to technical problems during printing the vertical lines in the distribution charts of the plankton have been omitted. Thereby zonal boundaries of calcareous nannoplankton and foraminifera are not visible anymore. By this incident the interpretation of sections in the Paleogene of the Gams Basin was lost.

The reproduction of figures 4, 6, 8, and 10 should help to clarify the uncertainties of the above cited investigation.
