

Further note on some Tertiary gastropods of Yunnan (China).

The three *Physa*-like forms I have described from a lacustrine bed in the eastern part of Yunnan Province, China (1935) were later on considered to belong to a distinct genus, which I have described as *Pseudophysa*, of the Planorbidae (1938). At the time I described that genus, comparison was made with species of *Isidora* EHRENBERG (-*Bulinus*). Further study indicates this late Tertiary genus to be more closely related with *Culmenella* CLENCH 1927 and *Camptoceras* BENSON 1843, of which genera several species have been described from the recent faunas in India and Japan. *Pseudophysa* is considered to belong to the subfamily Bulininae, which has been elevated to family rank by some authors as Bulinidae.

The name *Bulimus kingi* YEN (1935: 327) is preoccupied by GRAY (1825: 414) and I propose *Bulimus zilchianus* (new name) as a substitution, acknowledgement to my friend, Dr. A. ZILCH, of the Senckenberg-Museum, who recently has called my attention to this case of homonymy.

Teng-Chien Yen, Washington.

Sollea n. nom.

Der Name der von mir aufgestellten Gattung *Tylophora* DAHMER 1936 (Abh. preuß. geol. Landesanst., N. F. 168, S. 23) ist durch *Tylophora* PAVESI 1880 (Arachnidae) präokkupiert und wird hiermit durch *Sollea* n. nom. ersetzt. Ableitung des Namens: Zu Ehren von Prof. Dr. GERHARD SOLLE, Frankfurt a. M.

G. DAHMER, Bad Soden a. T.
