

# Meteorologische Beobachtungen

an der k. k. Universität

Innsbruck.

Jahr 1891.

---

Länge von Greenwich  $11^{\circ} 24'$  E. Breite  $47^{\circ} 16'$  N.

Seehöhe 575 m.

Höhe der Thermometer über dem Boden 1·7 m.

Höhe des Randes des Regenmessers über dem Boden 0·8 m.

Correction, um die Barometerstände vom 1. Jänner bis 16. Juli  
auf das gegenwärtige Niveau des Barometers zu reducieren  
= + 1·6 mm.

---

Mit 1. Jänner 1891 begannen, nach langer Unterbrechung, die meteorologischen Beobachtungen an der Universität aufs Neue. Durch Schaffung einer Lehrkanzel für kosmische Physik, welche dem Unterzeichneten verliehen wurde, war es selbstverständlich geworden, dass auch ein meteorologisches Observatorium errichtet werde. Es gelang mir, die regelmässigen Beobachtungen des Luftdruckes der Temperatur, Feuchtigkeit und Bewölkung, sowie des Windes und der Niederschläge mit 1. Jänner 1891 zu beginnen. Die Registrirungen des Luftdruckes und der Temperatur konnten erst im Laufe des Jahres aufgenommen werden. Ein Anemometer für die Windgeschwindigkeit, aber leider kein selbstregistrierendes, sowie eine Windfahne, wurden im Sommer auf dem mit einer Plattform versehenen Thurme der Universität aufgestellt.

Weitere Vermehrungen an Instrumenten zur besseren Ausgestaltung des Observatoriums sind noch zu gewärtigen.

Für dieses Jahr konnten nur die gewöhnlichen regelmässigen Beobachtungen zur Publikation gelangen.

Ueber den Standort der Instrumente mögen folgende Angaben genügen:

Das Barometer befand sich bis 16. Juli 1891 im dritten Stocke eines Privathauses in der Schmerlinggasse; vom 16. Juli ab im Gartenzimmer des botanischen Gartens, etwa 17 Meter tiefer als im Privathause. Um die Beobachtungen der ersten 6 Monate auf den nunmehrigen Standort des Barometers zu reducieren, ist eine Correction von + 1.6 mm anzubringen.

Für die Jahresübersicht ist diese Correction schon angebracht.

Die Thermometer befanden sich von Anfang an im botanischen Garten der Universität an einer Nordwand über bewachsenem Grunde.

Der Regenmesser steht in dem für Versuche abgeschlossenen Theile des botanischen Gartens vollkommen frei. Die Tagessummen des Niederschlages verstehen sich von 9 Uhr Abends bis 9 Uhr Abends.

Das Anemometer und die Windfahne sind auf dem Thurme der Universität angebracht. Da die Anemometerbeobachtungen erst im September begannen, so können heuer noch keine Resultate zur Veröffentlichung gelangen.

Indem ich noch der Baubehörde der k. k. Statthalterei, der Direction der k. k. Centralanstalt für Meteorologie und Erdmagnetismus, sowie dem Vorstande des botanischen Gartens der Universität, Herrn Prof. Dr. Heinricher, hiemit den Dank für die Förderung der meteorologischen Beobachtungen ausspreche, muss ich mich für heuer begnügen, die regelmässigen Beobachtungen, wie sie an einer Station zweiter Ordnung gemacht zu werden pflegen, in extenso zu publicieren, für die folgenden Jahre wird dann grösseres Materiale auch von den Resultaten der selbstregistrierenden Instrumente zur Verfügung stehen.

Innsbruck 1892.

J. M. Pernter.
