

Beobachtungen
am meteorologischen Observatorium
der k. k. Universität
Innsbruck.

Jahr 1892.

Länge von Gr. $11^{\circ} 24'$ E. Breite $47^{\circ} 16'$ N.

Seehöhe 575 m.

Höhe der Thermometer über dem Boden 1·7 m.

Höhe des Randes des Regenmessers über dem Boden 0·8 m.

Schwerecorrection (Breite und Höhe) + 0·06 mm.

Constante Correction des Barometers noch nicht angebbar.

Die Beobachtungen des Jahres 1892 wurden wie im vorigen Jahre zu den Stunden 7^h 2^h 9^h gemacht. Die Aufstellung der Instrumente blieb durchwegs dieselbe.

Luftdruck und Temperatur werden von Richard'schen Barographen und Thermographen registriert; die Reductionen derselben werden mir zu einer eigenen Arbeit Veranlassung geben.

Die Ausgestaltung des Observatoriums schreitet allmählig vorwärts.

Die Form der Publication der Beobachtungen ist dieselbe geblieben wie im vorigen Jahre, doch habe ich die Maxima und Minima der Temperatur aus den Aufzeichnungen des Thermographen entnommen.

Innsbruck 1893.

J. M. Pernter.

Jänner.
