

TRICHOPTEROLOGICAL LITERATURE

Many commercial retrieval systems are not complete and are often abandoning taxonomic papers. It is therefore necessary to have a literature list for our own need. Please help to complete this literature list by sending me reprints or references. Please include other scientific works which are not available for general distribution, but may be used in libraries, in particular dissertations which in some countries are produced in very small numbers. These works are sometimes voluminous and contain a lot of new information. -

If you send me reprints, please make sure that the complete reference is included, that is the title of the journal, the volume, the year of publication, and the original page numbers. There are some exceptional journals which have no page headings, while in other cases reprints are paginated separately. This is not adequate for citation.

Authors, editors and referees are requested to indicate clearly in the titles of publications which animals and plants are dealt with, with the **scientific names** and the **higher groups**. Do not use common names only, or terms such as "macroinvertebrates". Thus, please write **Studies on Hydropsyche pellucidula** (Trichoptera, Hydropsychidae) rather than **Studies on the yellow-spotted river worm**. References to papers without clear indication of the species or higher groups in the title which I have not checked will not be included.
