

Trichopterological literature

This list is informative which means that it will include any papers from which fellow workers can get information on caddisflies, including dissertations, short notes, newspaper articles etc. It is **not** limited to formal publications, peer-reviewed papers or publications with high impact factor etc. However, a condition is that a minimum of one specific name of a caddisfly must be given (with the exception of fundamental papers e.g. on fossils). The list does not include publications from the internet. - To make the list as complete as possible, it is essential that authors send me reprints or xerocopies of their papers, and, if possible, also papers by other authors which they learn of and when I do not know of them. If only references of such publications are available, please send these to me with the complete citation.
