p. 146: additional remarks

Concluded from text *Antheraea* (*Antheraea*) *hagedorni* NAUMANN & LOURENS, 2008 has been originally placed into the *yamamai*-subgroup of the *helferi*-group. We placed *A. (A.) hagedorni* temporarily into the *helferi*-subgroup due to the pattern morphology of the male holotype and due to the genitalia morphology. In our opinion this taxon is intermediate *helferi* and *yamamai* rather and can be a very early off-spring of an ancestor of the *helferi*-group.
