

BUPRESTIS

A semi-annual newsletter devoted to the dissemination of information about buprestids and students of this group

Dear friends,

For Christmas greetings it may be too late but for the New Year I wish you all the very best, health, peace and time enough for field trips and studies on our buprestids.

It's a very long list this time containing a lot of new information. I did not list everything, which was published in the Catalogue of Palaearctic Coleoptera, volume 3. The new acts and comments cover 21 pages in this book.

I hope that I did not forget something you wrote to me. If so, please tell me that I can bring it in the next issue of BUPRESTIS.

The new deadline for the next issue of BUPRESTIS will be 15. July 2008.

Cordially yours

Hans

Already a long time ago Chuck BELLAMY sent me the following warning:

A WARNING ABOUT CHEMICAL FUMIGANTS!

The common 'no pest strip' [chemical name: dichlorvos, trade names: DDVP, vapona, duravos] is used in insect collections both large and small, both public and private. There are data suggesting that exposure to this chemical, an organophosphate, may have connections to several serious health conditions. Included are possible connections between this chemical, or class of pesticides, and the following diseases that have taken several notable coleopterists including:

Gayle Nelson died on Sept. 24, 2005 of multiple myeloma and his doctor reportedly asked him "have you ever been exposed to vapona?" Gayle had used vapona as a fumigant in his large collection over the years.

Sebastian Endrödy-Younga, Transvaal Museum, Pretoria, died February 26, 1999 of motor neuron(e) disease. The Coleoptera Department in Pretoria was overly fumigated with vapona for many years.

Ms. Nancy Adams, was a collection manager at the U.S. National Museum of Natural History, Smithsonian Institution, Washington. She died in September 2005 of non-Hodgkin's lymphoma.

and I was successfully treated for non-Hodgkin's lymphoma in mid-2000 while working in the Coleoptera Department, Transvaal Museum.

Please consider the chemical fumigant(s) you use in your collection and the potential for adverse effects to your health and/or that of your family, friends and colleagues.

sincerely, Chuck Bellamy.

And then there is a letter from Svata BíLÝ:

Dear friends,

on July 1, 2007 I was retired and I finished my official work in the National Museum. I had been working in the Dept. of Entomology 30 years and during this period I was in contact with most of the Buprestophiles in the World. I would like to thank you for your cooperation, help and many nice personel meetings. Now, if you need anything from our Department, contact please my successor and a new curator of Buprestidae Vit Kubáò (vkuban@volny.cz) or the head of the Department (Jiri Hájek: jiri_hájek@nm.cz).

My retirement is not the end of my work on Buprestidae, of course. On the contrary, I hope I will have now more time for beetles since I will not be wasting time with endless and stupid museal administrative. I would like to finish a few long-term projects (revisions of Chalcogenia, N American Melanthaxia, Mexican Agrilaxia) and to describe step by step tens and tens of undescribed Anthaxia which I have gathered during my life. I will have my working place with PC, binocular and microscope in my former office so you can contact me also in the future on my official e-mail address (svatopluk_bily@nm.cz).

Sincerely yours,

Svata

F. NEW TAXA

(In the first column the name, author, year of publication and page number of the new taxon is shown; the second column indicates the type locality, state and province; and the third column the collection where the type is deposited)

The new Catalogue of Palaearctic Coleoptera, Volume 3, contains many new acts – resurrections of old names as well as new synonyms. It would be too much to repeat them all here. The new catalogue will be now the basis of our work for many years and therefore it should be part of our libraries.
