

BUPRESTIS

A semi-annual newsletter devoted to the dissemination of information about buprestids and students of this group

Editor: Hans Mühle
Hofangerstr.22a
D-81735 München

Germany

Dear friends,

This time you will receive BUPRESTIS in the format you know already since long time. Some years ago I started to add the list of new species and taxonomical changes. Now Chuck will do that in an electronic catalogue. He explains his plan in our Forum. I strongly support his plan and I dearly hope you also will support him with your news.

On the other hand I am still interested to get your news and publications. I guess everybody has his own system to remain up-to-date. In Europe (and throughout the world) there are many journals on entomology. To find new papers dealing with buprestids we (Chuck and me) need your help.

Finally I wish you and your families all the very best for Christmas and a Happy New Year.

Cordially yours

Hans

The deadline for the next issue of BUPRESTIS will be 15. October 2010.

Hans Mühle

B. SPECIES WANTED FOR RESEARCH OR EXCHANGE

&

C. REQUESTS FOR LITERATURE

&

D. FORUM

In the following contribution Chuck **Bellamy** proposes a new way to support us with necessary information.

World Catalogue and Electronic Version

Since the publication of the *World Catalogue*, I have been occupied with upgrading it into the first electronic version, which I hope will be ready for sale and distribution in 2010. It will be with a very nominal cost and will be in continual upgrade annually for as long as I can manage.

The electronic catalogue will feature a fully corrected version from what was published in the five volumes of the *World Catalogue* and will include as much host data as I can locate and input. Therefore my repeated requests to receive reprints from as many of you as possible will continue. Each year I carefully review the annual volume of the *Zoological Record* to make certain that I have included all new taxa described in the subsequent year. I am sometimes surprised by taxon names and publications that I had been completely unaware of. However, I am, and have been, very grateful to all of my colleagues who have sent their papers, and more recently PDF copies, for inclusion in this continuing project.

I am searching for the proper (i.e. secure) way to distribute the electronic catalogue in a way that protects my investment of time and the copyright. In an age where copyright is not enforced in many areas, e.g. licensed software, music and video downloads, etc., I cannot simply spend so many hours to produce a large document and then distribute it in an electronic format that would encourage secondary distribution. PDF is a great way to share data and documents, but there is nothing to stop a subscriber to the annual catalogue updates from sending the files to others without each paying the costs. If anyone can suggest a more secure format or distribution model, I would be glad to know about it.

And about the costs, while the printed copy is priced way too high for many of us (including me) to afford, the electronic version will be a very economical price, although I cannot predict what it will be just yet. And with the purchase of the electronic version, the annual upgrade will be included for no further fee.

World Checklist on-line

(<http://www.fond4beetles.com/Buprestidae/WorldCat/Classif/webcat.html>)

I have prepared and host on-line a completely up-to-date Checklist of World Buprestidae and it evolves with the addition of every new paper I receive.

Type Image links (http://www.fond4beetles.com/Buprestidae/Image_Types.html)

I have begun linking images of various type specimens to the world checklist. Many of these images were taken during visits to certain large collections many years ago and many of the images are far below the type of resolution that modern digital photography permits, but having even a dorsal habitus image of a type available is better than nothing. Anyone who might wish to share images of types or identified vouchers that I do not have is encouraged to contact me and send those images. I will then optimize them for the web and host them from the World of Jewel Beetles website.

Data-sharing

Along with the on-line checklist, I also host a free download of the large Bibliography in PDF format. This is available to anyone who has access to the internet and can download files. I upgrade the bibliography several times a year, and am always interested to learn of additional publications on Buprestidae. The most recent version if from May 2009 and is available at:

<http://www.fond4beetles.com/Buprestidae/WorldCat/Refs/WebRefsMay2009.pdf>

Along with the bibliography, I would like to mention again that for anyone who plans to study or revise any particular buprestid group or taxon, I would be happy to copy that section from the electronic catalogue and send it directly to support your research. I would do this on a genus basis, so if you plan to revise the South African *Chalcoplia*, the Australian *Neospades* or the Philippine *Sambus*, I can send the entire suite of data that has been captured under those respective genera.

Newsletters (<http://www.fond4beetles.com/Buprestidae/newsletter.htm>)

After archiving the electronic issues of **BUPRESTIS**, and starting my own electronic newsletter, I recently started a blog: **Jewel Beetle News** (<http://jewelbeetlenews.wordpress.com/>), which I hope can be a more dynamic method of communicating about certain subjects. While I am the moderator of the blog, anyone can join and post comments, etc.

&

E. PUBLICATIONS

Papers marked with an “*” I did not obtain, so I cannot give any further information about the new species or nomenclatorial changes.
