

# BUPRESTIS

An annual newsletter devoted to the dissemination of information about buprestids and students of this group

Dear friends,

As it is written in the headline, with this newsletter you should get as much information as possible about buprestids. So you will find in this issue again papers issued already some years ago and papers on applied entomology, pest management etc. I want to thank all colleagues who helped me with information.

2020 was a difficult year to all of us. In most cases Covid-19 caused an interruption of our scientific work. We could not travel as usual to get more details on plans we are working on, the access to libraries and collections became more and more difficult; meetings which are an essential platform for exchanging ideas and material could not take place. On the other hand we got time to finish those tasks at home we should have done already since months.

There is still no solution how to handle the journal "Procrustomachia". The commission did not decide on this case (Case 3769) yet. There is an opinion of Frank-Thorsten Krell, one of the commissioners, but until there is no official Opinion published to end the dispute on the validity of Procrustomachia I will continue to record the titles of the papers only.

I wish you and your families a Merry Christmas and for the New Year health, peace and patience.

For the next issue, please send me your news up to 1 July 2021.

Hans
