

III.

Aus Ceylon liegt mir eine neue *Derocrania*-Form (ohne genaueren Fundort) vor:

Tricondyla (Derocrania) Agnes (nov. spec.).

Species generis gratiosissima: in honorem uxoris meae carissimae nominata.

Der. Nietneri Motsch. *simillima*, *statura multo graciliore*; *capite vix minore*; *prothoracis parte angusta antica evidenter (parte crassa postica paullo) longiore*; *elytris aliquanto magis elongatis, sculptura magis perspicua: antice vix grossiore, in medio minus evanescente, postice fere aequae visibili atque in parte media illius speciei*; *pedibus multo longioribus*; *parte laterali mentali (in Der. Nietneri spinosa valdeque deflexa) multo brevior, minus acuta, magis anticem versus directa (non rectangulariter deflexa).* — Long. $13\frac{1}{2}$ mill.

1 ♂; Ceylon.

Trochanteribus piceo-brunneis; femoribus tibiisque rufo-brunnescentibus (his distaliter — praesertim posticis — nigricantibus); tarsis antennisque nigricantibus hinc inde paullo metallescentibus.

Pogonostoma septentrionale Fleut.

subsp. *simplex* (nov. var.).

Differt a typo ♂♀ statura vix minore, perparum angustiore; corpore supra obscure-cyanescente opaco; pronoto paullo subtilius rugato, ad medium marginem densius distinctiusque tuberculato. ♀ pronoto multo minus basim versus declivi (♂ vix minus convexo quam typo); ♀♂ elytrorum apicis dente medio paullo acutiore, ♀ angulo laterali externo fere aequae acute prominente atque hoc dente medio (inter dentes semilunariter exciso). — Long. $15\frac{1}{2}$ — $17\frac{1}{2}$ mill. sine labro.

♂♂; Soalala, Ankarahitra, Suberbieville: H. Perrier.

(ab amico L. Fairmaire mihi datum).

Dr. W. Horn.
