Checklist of Bark beetles of Iran (Coleoptera: Curculionidae: Scolytinae)

Sudabe AMINI & Jamasb NOZARI

Abstract

Bark beetles in subfamily Scolytinae comprise more than 6000 described species, 225 genera and 26 tribes in the world. Bark beetles are one of the most important pests that cause high damage in the forest continent. This is the list of Iranian Scolytinae species and their distribution in different parts of Iran. This list is mainly based on literature from 1972 to 2014. A total of 69 species from 26 genera were recorded from Iran.

Zusammenfassung

Borkenkäfer der Unterfamilie Scolytinae umfassen mehr als 6000 beschriebene Arten, 225 Gattungen und 26 Triben in der Welt. Borkenkäfer sind eine der wichtigsten Schädlinge, die hohe Schäden im Wälder anrichten können. Vorgestellt wird hier die Liste der iranischen Scolytinae-Arten und deren Verbreitung in den verschiedenen Teilen des Iran. Diese Liste basiert hauptsächlich auf Literatur von 1972 bis 2014. Insgesamt 69 Arten aus 26 Gattungen werden für den Iran registriert.

Introduction

In previous bark beetles are considered as a separate family Scolytidae, that include the two subfamilies Scolytinae and Hylesinae (WOOD 1982), but in new classification bark beetles are integrated to within the family Curculionidae as subfamily Scolytinae (LAWRENCE & NEWTON 1995, ALONSO-ZARAZAGA & LYAL 1999), as supported by phylogenetic studies using molecular and morphological characters (MARVALDI et al. 2002). The subfamily Scolytinae with 225 genera and more than 6000 described species (WOOD 1982) is one of the largest groups in Coleoptera (EROĞLU et al., 2005). Bark beetles are economic important pest, and cause high damage in forest ecosystem (MAY 1994; OBERPRIELER et al. 2007). Scolytines are in small size <1 mm to 1 cm in length, but most species are generally 2–4 mm long. These beetles usually live in dead or weakened trees; however, some species attack healthy trees (WOOD 1982). Some species transfer pathogenic Ophiostomatoid fungi which causes lethal Dutch elm disease (DED) in *Ulmus* (elm) trees (GIBBS 1978).

Checklist of bark beetles are provided for some parts of world such as Southern Florida (ANDERSON 1992), New Zealand (BROCKERHOFF 2003), Texas and Oklahoma (ATKINSON 2013). Although bark beetles species of Iran have been studied partly (AMINI et al. 2013, SAMIN et al. 2011, MODARESS AWAL 1997), it is necessary to investigate collections of museum and references. This presented checklist is proposed to facilitate access to the most recent data on Iranian bark beetles and update the recorded species from Iran. This checklist also provides distribution and host plant of bark beetles species in Iran.

Material and Methods

This list is based on the relevant literature on bark beetles of Iran. The most of the data in this checklist refers to available literature and references from 1988 to 2013. Additional data are included from specimens that have deposited in Hayk Mirzayans Insect Museum in Iran.

Results

A total of 73 species belonging to 29 genera of Scolytinae are listed in this checklist. It also provides for each species its distribution and host plant in Iran. Each genus and species is listed with its page number from catalogue of Palearctic Coleoptera, volume 7, Curculionidae 2011 and other references that was used. In this study the most species is recorded from the North of Iran, including Mazandaran, Guilan and Golestan province. Review of the species is presented as follow:
