

Vermutlich ist das Vorkommen von *decora* auf einige Berge in Westjava beschränkt. Ich beobachtete selbe wenigstens im Osten der Insel nie.

Synonymical note about Satyridae.

In the last part (II) of the „Proceedings of the Zoological Society of London“, issued August 1st 1894, Miss Emily Mary Sharpe has founded on pag. 336 a genus of Satyridae as a new one under the name of *Rhaphiceropsis* with this very insufficient character: „Similar to the genus *Neope*, but easily distinguished by the spatulate club to the antennae.“ The type is named *Rhaphiceropsis Pringlei* sp. n., captured on the road from Kikuyu to Victoria Nyanza, and figured on plate XIX, fig. 1 and 2. These figures prove, that *Rhaphiceropsis Pringlei* is identical with *Aphysoneura* (n. g.) *pigmentaria* Karsch, from North Usambara, described in No. 12 of the „Entomologische Nachrichten“, issued June 15th, 1894.
