

adpressis fuscescentibus vestitum, depilatum sordide olivaceum
Dentes sporocarpii paullo longiores. Sori utrinque 6—7.

M. (Drummondii var.) salvatrix Hanstein in Monatsb.
d. Ak. Febr. 1863 p. 103; A. Br. in Monatsb. Oct. 1863 p.
427. Speciosa, rhizomate etiam in planta fructifera elongato.
Foliola fronte crenata vel crenato-incisa, crenis 6—8 rarius
pluribus, decrepita brunneo- vel coffeaceo-fuscescentia. Pe-
dunculus sporocarpio triplo- ad quadruplo longior, leniter
curvatus. Sporocarpium adscendens, compressum, ovale, linea
ventrali convextiore subobliquum, apice rotundatum, ad ma-
turitatem usque pilis fuscescentibus dense vestitum, depilatum
intensius fuscum et conspicue costatum. Dentes quam in *M.*
Drummondii genuina fortiores, inferior longior obtusus, su-
perior acutus, maturitate non decorticatus. Sori utrinque 8—12.

M. (Drummondii var.) elata A. Br. Statura fere praece-
dentium, rhizomate plantae fructiferae valde constipato. Fo-
liola integerrima vel fronte leniter repando-crenata, villosa,
decrepita flavescentia. Pedunculus longissimus sporocarpium
quinquies ad vigesies longitudine exsuperans, erectus. Sporo-
carpium erectum, valde compressum, ovale vel oblongum,
subaequilaterum, altero latere basi brevissime bidentatum,
pilis argenteo - canescensibus ad maturitatem usque dense
vestitum, depilatum laete aut griseo-fuscum, conspicue costa-
tum. Sori utrinque 7—9.
