MITTEL bzw. -SUMME										

(Kurzcharakteristik) 1988: Winter mild; Frühling kühl und recht trocken; Sommer recht trocken (Badetemperaturen fast drei Wochen erreicht!); Herbst mild und feucht. Sehr aus der Art schlugen März (kalt und fast dreimal soviel Niederschlag (Schnee!) wie normal! Regenreichster März seit Aufzeichnungsbeginn in Lunz!) und Dezember (mild und sehr niederschlagsreich) - zusammen mit dem regnerischen September ergeben sie doch nur ein „normal“ feuchtes Jahr.

1989: Winter ebenfalls mild, schneearm und trocken; Frühling feucht; Sommer sehr regnerisch (kaum Badetemperaturen!); Herbst eher trocken und gegen Ende kalt; Winterbeginn kalt und fast ohne Schnee. Regenmenge wenig über dem Schnitt. Auffallend der warme März (wärmster März seit 1977).
