

C A T A L O G

DER

COLEOPTEREN VON JAPAN

MIT ANGABE

DER BEZÜGLICHEN BESCHREIBUNGEN UND DER
SICHER BEKANNTEN FUNDORTE.

ZUSAMMENGESTELLT

VON

H. v. ŠCHÖNFELDT.

Vorrede.

Mit Freuden folge ich der Aufforderung des geehrten Herrn Autors, den nachfolgenden Catalog der Käfer von Japan mit einigen einleitenden Worten dem entomologischen Publikum zu übergeben. Ich thue dies um so lieber, als ich mich selbst seit einer Reihe von Jahren mit der Coleopterenfauna der benachbarten Grenzgebiete des asiatischen Festlandes, Amur und Nord-China beschäftigt habe und den Werth eines Cataloges der Käfer von Japan, so sorgfältig und gewissenhaft bearbeitet wie den vorliegenden, nur zu schätzen weiss.

Die Fauna des grossen Inselreiches Japan bietet gerade deshalb auch für europäische Forscher und Sammler so hohes Interesse, weil sie nur als das äusserste östliche Grenzgebiet der grossen paläarctischen Fauna, die sich über ganz Europa, Nord- und Centralasien bis zur Amurmündung erstreckt, anzusehen ist. Eine nicht geringe Anzahl Arten sind allen angegebenen Gebieten gemeinsam; natürlich verschwindet diese Gemeinschaft mehr und mehr, wenn man z. B. Westeuropa mit dem Amurgebiet in Vergleich stellt; dieses letztere steht aber wiederum Japan in Bezug auf gemeinsames Vorkommen vieler Arten ungemein nahe. Ja das gemeinsame Gebiet erstreckt sich noch weiter südöstlich. Die von Dr. Herz im Innern der chinesischen Halbinsel Korea gesammelten Käfer, die mir eben zur Bearbeitung vorliegen, zeigen die überraschende Thatsache, dass fast $\frac{2}{3}$ der Arten auch auf den gegenüberliegenden japanischen Inseln vorkommen und die Fauna der chinesischen Stadt Pecking steht in ebensolchem Verhältniss zu den südlichsten Theilen des Amur.

Die Fauna von Japan hat schon lange Zeit das Interesse erregt. Ueber die einschlägige Literatur habe ich bereits vor einigen Jahren in der Deutschen Entomologischen Zeitschrift 1879 in einem Aufsätze „Die coleopterologische Ausbeute des Prof. Dr. Rein in Japan 1874 und 1875“ berichtet und namentlich auch die älteren russischen Publicationen aufgeführt; anderes findet sich in meinem „Catalog der Coleopteren von Sibirien mit Einschluss derjenigen der turanischen Länder, Turkestans und der chinesischen Grenzgebiete, Berlin 1880—81“. In den letzten Jahren fanden besonders die reichen Reiseausbeuten des Herrn Lewis zahlreiche Bearbeiter in englischen Zeitschriften, besonders den Transactions Entomological Society London, Annales and Magazine Natural History, Entomologists Monthly Magazine, und in deutschen Zeitschriften, besonders von den Herren von Kiesewetter, Kraatz, Reitter, Weise und von Heyden, zum Theil gelegentlich verschiedener Arbeiten über die ostasiatische Fauna.

Eine Zusammenstellung der japanischen Käfer in Catalogsform erschien seither nur 1879 von Herrn George Lewis, doch gibt derselbe keine Citate der Beschreibungen und Vaterlandsangabe und hat deshalb wenig praktischen Nutzen als Handbuch.

Der vorliegende Catalog des Herrn v. Schönfeldt bringt bei jeder Art diese Daten mit der grössten Genauigkeit und wird seinen Zweck, ein Hilfsmittel bei dem Studium der so interessanten japanischen Fauna, gewiss nicht verfehlen.

Aus praktischen Gründen wurde von einer systematischen Anordnung innerhalb der Gattungen Abstand genommen und eine alphabetische eingehalten.

Häufig im Text vorkommende Citate sind abgekürzt und bedeutet:

Bei zwei aufeinanderfolgenden Zahlen die erste die Jahreszahl des betreffenden Werkes, die zweite die Seitenzahl, z. B. 63.238 = Jahr 1863, Seite 238.

Bat. Geod. = On the Geodephagous Coleoptera of Japan in Transact. Ent. Soc. London 1873.

Bat. add. Geod. = Supplement dazu. Trans. Ent. Soc. 1883.

Sharp. Dytisc. = On aquatic carnivorous Coleoptera or Dytiscidae. Royal Dublin Society (Scientif. Transact. 1880—82) 1882, Vol. II, Series II.

B. E. Z. = Berliner Entomologische Zeitschrift.

D. E. Z. = Deutsche Entomologische Zeitschrift.

† vor dem Namen bedeutet, dass die Art auch auf dem paläarktischen Festlande, besonders aber in Ostsibirien und am Amur, selbst in Europa vorkommt.

In dem vorliegenden Cataloge sind aufgezählt 2682 Arten ohne Varietäten; der im Jahre 1879 erschienene Lewis'sche Catalog führt 2227 Nummern auf, von denen aber 132 wegfallen, die nur mit n. sp. oder sp. ohne Namen benannt sind, es bleiben also 2095 Arten.

Von diesen 2682 Arten kommen 391 auch in Ostsibirien und Amur, also fast $\frac{1}{7}$ der Gesamtsumme vor, wobei noch zu berücksichtigen ist, dass einzelne Familien am Amur noch sehr wenig intensiv gesammelt wurden, während dies in Japan zum Theil sehr eingehend geschah. Aus Japan sind beispielsweise 68 Pselaphidae bekannt, aus Sibirien (Ural bis Amur) kenne ich nur 8; aus Japan sind von Cossonidae 20 Arten aus 16 Gattungen, vom Ural bis Amur nur 8 Arten aus nur 2 Gattungen bekannt. — Als Vergleich führe ich weiter an, dass aus dem Gebiet von Frankfurt und Nassau 3334 Arten bekannt. Japan hat eine Grösse von 14 geographischen Längengraden, das Vergleichsgebiet von kaum 8 geographischen deutschen Meilen in der Länge.

Abgeschlossen Weihnachten 1886.

Dr. L. von Heyden.
