

Berichtigung

Durch einen Druckfehler in der letzten Ausgabe der Koleopterologischen Rundschau wurde die Bestimmungstabelle der europäischen *Cidnopus* Arten in der Arbeit von CATE & PLATIA (Koleopt. Rdsch. 59: 185 - 188) nur unvollständig gedruckt. Die Tabelle wird nun in der vollen Länge wiedergegeben.

Key to the known species of *Cidnopus* THOMSON from Europe

- 1 Pronotum very convex, sharply sloping on sides, with lateral margin invisible or partially visible in dorsal view 2
- Pronotum slightly convex, gradually sloping on sides, with all lateral margin visible in dorsal view 5
- 2 Elytra clearly wider at base than pronotum 3
- Elytra about as wide at base as pronotum 4
- 3 Punctures of pronotum smaller, separated by a distance equal to less than half their own diameters on disc, interspaces smooth and shiny. South Slovakia, Bulgaria (see PENEV and TARNAWSKI, 1987) *ruzenae* (LAIBNER)
- Punctures of pronotum larger, nearly contiguous on disc, interspaces with dull appearance, sometimes rugose. Europe, Sibiria *aeruginosus* (OLIVIER)
- 4 Third segment of antenna in the male triangular (female unknown). North Greece *macedonicus* n. sp.
- Third segment of antenna with sides subparallel in both sexes. Italy, Spain, Yugoslavia (Macedonia) *pseudopilosus* PLATIA and GUDENZI
- 5 Second segment of antenna just longer than wide. European and Asiatic Turkey *crassipes* (SCHWARZ)
- Second segment of antenna clearly longer than wide. Europe, Asia Minor, Caucasus *pilosus* (LESKE)
