## Rediscovery of *Acilius sinensis* PESCHET, 1915 (Coleoptera: Dytiscidae)

L. HENDRICH

### Abstract

The rediscovery of *Acilius sinensis* PESCHET, 1915 (Coleoptera: Dytiscidae) in Yunnan province, China, is reported. A male and a female were collected in a water-filled rut on a forest track 31 km east of Luxi at 2280 m. Photographs illustrating both sexes and the habitat are provided.

**Key words:** Coleoptera, Dytiscidae, *Acilius sinensis*, Yunnan, China, conservation.

### Introduction

A comprehensive taxonomic revision of the Holarctic genus *Acilius* LEACH was recently published by BERGSTEN & MILLER (2005). In total, six Palaearctic and seven Nearctic species were recognized. None of these species is Holarctic in distribution. One of the rarest members of this genus is *Acilius sinensis* PESCHET, 1915, an isolated southwest Chinese species. No specimens have been collected since at least 82 years (BERGSTEN & MILLER 2005). Neither a special field trip to Yunnan by J. Bergsten in September 2000 nor the extensive China Water Beetle Survey (JÄCH & Ji 1995, 1998, 2003) revealed any further specimens. The rediscovery of the species in western Yunnan gives some hope that other missing Chinese lentic water beetle species, such as *Hygrobia davidi* BEDEL (Hygrobiidae), are still extant.

### Material and Methods

Specimens mentioned in this work are deposited in the following collections:

CLH Collection Dr. Lars Hendrich, Berlin, Germany (property of Vienna Natural History Museum, Austria)  
ZSM Zoologische Staatssammlung, München, Germany

### *Acilius sinensis* PESCHET, 1915 (Figs. 1, 2)

Material examined: 1 ♂, 1 ♀: "China (Yunnan) Dehong Dai Aut. Pref. mount. Range 31 km E Luxi, 2280 m 24°29'31" N 98°52'58" E, 3.VI.2007 D.W.Wrase (19)" (CLH); 1 ♀: "Yunnan", "Coll. Donckier", "Samml. A. Zimmermann", "Zoologische Staatss. München" (ZSM); 1 ♂: "Yunnan", "Type", "Samml. A. Zimmermann", "Zoologische Staatss. München" (ZSM); 2 ♂♂, 1 ♀: "Se Tchouan Chine" [Sichuan], "TYPE", "Samml. A. Zimmermann", "Zoologische Staatss. München" (ZSM).

Distribution (Fig. 3): China: Sichuan and Yunnan between 1691 m and 2280 m in altitude. From Sichuan no precise locality data are known (BERGSTEN & MILLER 2005). From Yunnan it is recorded from the north-eastern and western part of the province. The new record is not far away from the border to Myanmar.

Collecting Notes: Both specimens were collected by a Chinese taxi driver in a water-filled rut on a forest track without having a net or other proper equipment (D. Wrase and A. Pütz, pers. com.).

Fig. 1: Habitus of *Acilius sinensis*, male.

Fig. 2: Habitus of *Acilius sinensis*, female.

Fig. 3: Distribution of *Acilius sinensis* in Yunnan, China; square = new record, dots = localities listed in BERGSTEN & MILLER (2005).

Fig. 4: Woodland track (31 km E Luxi, 2280 m, Yunnan, China). The water-filled rut, where *Acilius sinensis* was collected, is just right of the car, not visible on the photograph.

The forest track was at the edge of a remnant, secondary growth pine forest surrounded by pastures and grassland (Fig. 4).

Together with the two *Acilius* one specimen of the rare *Cybister convexus* SHARP, 1882 and two unidentified females of the *Agabus congener*-group were caught.

Conservation Status: Many parts of China are under severe pressure from human development. The author agrees with the suggestion of BERGSTEN & MILLER (2005) that *A. sinensis* should be included in the IUCN red list, although a more detailed survey is needed to evaluate the actual distribution, the exact habitat requirements and the conservation status of this species.

### Acknowledgements

The author warmly thanks David Wrase (Berlin, Germany) and Andreas Pütz (Eisenhüttenstadt, Germany) for providing this valuable material. Dr. Udo Schmidt (Selbitz, Germany) is thanked for the habitus photographs. The photograph of the habitat was taken by Andreas Pütz.
