The Crabroninae Wasps of "Biologiezentrum Linz"-Collection in Linz, Austria, (Hymenoptera, Apoidea, Crabronidae), Part 2

H. DOLFFUSS

A b s t r a c t : 8123 specimens of Crabroninae wasps of the following genera were examined: *Arnoldita* PATE 1948, *Crossocerus* LEPELETIER de SAINT FARGEAU & BRULLÉ 1835, *Entomognathus* DAHLBOM 1844, *Dasyproctus* LEPELETIER de SAINT FARGEAU & BRULLÉ 1835, *Kronbeinictus* LECLERCQ 1996, *Lindenius* LEPELETIER de SAINT FARGEAU & BRULLÉ 1835 and *Odontocrabro* TSUNEKI 1971.

All information on localities is given, however, with common species only localities outside Central Europe are listed.

The hitherto unknown females of *Crossocerus quinlani* LECLERCQ 1989 and *Lindenius hamiger* (KOHL 1915) and the unknown male of *Lindenius pallidicornis* (F. MORAWITZ 1890) are described.

K e y w o r d s : Apoidea, "Sphecidae", Crabronidae, Crabroninae

Introduction

To complement my previous publications (DOLFFUSS 2001, 2004a, 2004b) I have tried to identify a lot of Crabroninae of the Collection of "Biologiezentrum Linz" in Austria. Complete information including the localities and the dates of capture is listed. With widespread and commonly found species the exact localities and dates of capture are listed only if they were found outside of Central Europe. All together 8123 specimens of Crabroninae were examined (4121 ♀♀, 3002 ♂♂).

The hitherto unknown females of *Crossocerus quinlani* LECLERCQ 1989 and *Lindenius hamiger* (KOHL 1915) and the unknown male of *Lindenius pallidicornis* (F. MORAWITZ 1890) are described.

of this species is characterized by the following criteria: mandibles darkbrown, basal third part yellow, tooth on the inner surface small; median lobus of clypeus with two small rounded teeth in the middle (sometimes smelt) and two projecting teeth laterally; scapus completely yellow; thorax completely black; Vertex, scutum and mesopleura distinctly and coarsely punctated; propodeal enclosure coarsely striate; posterior furrow of Collare crenulated; episternalsulcus narrow and weakly crenulated; sternites not punctated. These criteria are exactly as in males! Pygidial area concave lateraly; 6.5 mm. The female of *L. hamiger* differs from *Lindenius ibex* in the shape of clypeus, strukture of propodeal enclosure and lacking punctuation on sternites. It differs from *Lindenius panzeri* by only basally yellow spots on mandibles and a small tooth on inner surface of mandibles, the sharp of clypeus and a narrow episternal sulcus. In the key of LECLERCQ 1989 the female of *L. hamiger* runs to § 13 and shold be separated at this point.

In the males of this subspecies the flagellum is not as broadened as in *L. ibex* s.str. Metatarsus of foreleg is regular, not broadened. In females of the examined material I could not find differences according to this subspecies. Maybe *L. ibex syriacus* is a variation as KOHL (1915: 292) mentioned.

***Lindenius sardashti* LECLERCQ 1975 1♀♀, 20♂♂**

This species is very similar to *L. ibex* (KOHL) but can be easily recognized by the form of the metatarses of foreleg. The males of Syria in this material are characterized by variable yellow spots on tergites. From the same locality I have seen a female with yellow spots on tergites like in *Ectemnius*. This may be the hitherto unknown female of *L. sardashti* Leclercq. As I know, *L. sardashti* is the only species of *Lindenius* with yellow marks on the abdomen!

J o r d a n - N W : 1♂, North Shuna, 29.-30.IV.1996, leg. Ma. Halada. S y r i a - S : 1♀, 5♂♂, 50 km SE Suwayda Anata, 20.-21.V.1996, leg. Ma. Halada. ***Lindenius subaeneus* LEPELETIER & BRULLÉ 1835 31♀ ♀, 66♂ ♂**

In these males from Turkey the pygidial area is narrow and long, sides on distal half are nearly parallel!

F r a n c e : 1♀, 1♂, 10 km S Carcassone, 85 km SW Toulouse, 18.V.2003, leg. J. Halada. K a z a k h s t a n - W : 3♀ ♀, Ryn-peski, 12 km S Urda, 3.VI.2001, leg. Miatleuski. ***Lindenius* sp. 1♀**

This female is characterized by the following criteria: Omaulus is missing; mandibles dark brown; median lobus of clypeus broad, lateral obtuse-angled; episternal furrow narrow; propodeal enclosure striated; pygidial area laterally concave; 5.0 mm.

This may be the hiterto unknown female of *Lindenius tingriensis* LECLERCQ 1989.

T u r k e y : 1♀, Agri env., 27.VI.1993, leg. Mi. Halada.

***Lindenius* sp. 1♀**

This female is characterized by a weakly crenulated hyposternaulus; the median lobus of clypeus is broad and obtuse, laterally without distinct teeth; mandibles black; propodeal enclosure coarsely reticulated; mesonotum and mesopleures coarsely punctated; 6.5 mm.

S y r i a - N E : 1♀, Hasake, 8 V.1996, leg. Ma. Halada.

***Lindenius* sp. 1♂**

This male is characterized by the following criteria: flagellomeres broadened beneath; mandibles completely black; median lobus of clypeus broad, lateral with projecting teeth; distal half of metatarsus II broadened; propodeal enclosure basally reticulate, posteriorly nearly smooth; tergites VI and VII laterally with long erected hairs; 5.0 mm.

T u r k e y : 1♂, Tuzlagozu (Baykan), 4.VI.1998, leg. Ma. Halada.

Lindenius sp. 32 ♀ ♀

These females are similar to *Lindenius hannibal* (KOHL 1898) but differ by the following criteria: flagellum completely black; mesopleuron only weakly striated horizontally or not striated at all; scutum and scutellum distinctly striated longitudinally; basitarsus III not broadened; 3.5-5.0 mm.

J o r d a n - N W : 5 ♀ ♀, North Shuna, 29.-30.IV.1996, leg. Ma. Halada.

S y r i a - S W : 5 ♀ ♀, 30 km N Dara Nawa, 18.V.1996, leg. Ma. Halada. T u r k e y : 16 ♀ ♀, Kahraman Maras, 40 km SE, 10.VI.1998, leg. Ma. Halada; 2 ♀ ♀, 30 km NW Gaziantep, 2001, leg. Snizek; 2 ♀ ♀, Tuzlagozu (Baykan), 4.VI.1998, leg. Ma. Halada; 2 ♀ ♀, 25 km E Malatya Kopeksiz, 8.VII.1997, leg. Ma. Halada.

The following 26 ♂♂ could not be named:

J o r d a n - N W : 8 ♂♂, North Shuna, 29.-30.IV.1996, leg. Ma. Halada. S y r i a - S W : 1 ♂, 30 km N Dara Nawa, 18.V.1996, leg. Ma. Halada. T u r k e y : 16 ♂♂, Kahraman Maras 40 km SE, 10.VI.1998, leg. Ma. Halada; 1 ♂, Tuzlagozu (Baykan), 4.VI.1998, leg. Ma. Halada. Probably all these males belong to the females from the same localities mentioned above!

O d o n t o c r a b r o T S U N E K I 1971 3 ♀ ♀

Odontocrabro orthodoxus HENSEN 1989 3 ♀ ♀

T u r k e y - S : 3 ♀ ♀, Halfeti (Birecik), 30.V.1998, leg. M. Snizek.
