Review of the Opiinae of the Malagasy Subregion (Hymenoptera: Braconidae)

M. FISCHER & M. MADL

A b s t r a c t : Till now nine genera and 46 species of Opiinae have been recorded from the Malagasy Subregion. Following new combinations are made: *Psytalia infuscata* (GRANGER 1949), *P. subsulcata* (GRANGER 1949) and *Pseudorhinopius variegatus* (GRANGER 1949). New records of *Diachasmimorpha fullawayi* (SILVESTRI 1914), *Fopius arisanus* (SONAN 1932), *Opius waterloti* GRANGER 1949, *Psytalia cosyrae* (WILKINSON 1927), *P. insignipennis* (GRANGER 1949), *P. sanctamariana* (FISCHER 1980) and *P. subsulcata* (GRANGER 1949) are dealt with.

K e y w o r d s : Braconidae, Opiinae, Madagascar, Mayotte, Mauritius, Réunion, catalogue, taxonomy, new records.

Introduction

The large braconid subfamily Opiinae contains about 1.900 species worldwide. Members are solitary parasitoids of eggs or larvae of different families of cyclorrhaphous Diptera, of which Agromyzidae, Anthomyiidae and Tephritidae are the major hosts. As several hosts are agricultural pests, Opiinae are often used in biological control programs (e.g. control of fruit-infesting Tephritidae).

The Opiinae of the Malagasy Subregion are poorly known. Up to date 46 species have been recorded from following islands: Madagascar, Mauritius, Mayotte and Réunion. There are no endemic genera, but 30 species are endemics.

Host records are available for four native species: *Psytalia distinguenda* (GRANGER 1949), *P. insignipennis* (GRANGER 1949), *P. sanctamariana* (FISCHER 1980) and *Psytalia subsulcata* (GRANGER 1949).

A lot of species have been released into different islands during biological control programs against agricultural pests, but several introductions apparently failed. As introduced parasitoids often change host and habitat, it is necessary to keep in mind all species. For example, *Diachasmimorpha fullawayi* (SILVESTRI 1914), which was successfully introduced into Réunion, arrived in Mauritius by natural means or inadvertently by human agency. The introduction of following species failed (in brackets country of introduction):

Diachasmimorpha longicaudata (ASHMEAD 1905) (Mauritius), *D. tryoni* (CAMERON 1911) (Mauritius, Réunion), *Opius dissitus* MUESEBECK 1963 (Réunion), *Opius* sp. (from

Peru into Mauritius), *Psyllalia incisi* (SILVESTRI 1916) (Mauritius), *P. phaeostigma* (WILKINSON 1927) (Mauritius). The list is incomplete due to access to literature of applied entomology.

Aulonotus mandrakensis (FISCHER 1968): FISCHER 2000: 115 (comb., key).

Distribution: Madagascar: Prov. Antananarivo: Mandraka.

Known from the Ethiopian Region.

Genus *B i t o m u s* SZÉPLIGETI 1910

Distribution: Ethiopian and Palearctic Region.

Valid species: 1.

Bitomus granulellus FISCHER 1994

Bitomus granulellus nov.sp. FISCHER 1994: 22 (key, descr. ♀, Madagascar), 23 (figs 1-5).

Bitomus granulellus FISCHER 1994: FISCHER 2006: 104 (key).

Distribution: Madagascar: Prov. Toamasina: Nosy Boraha (Sainte Marie).

Endemic.

Genus *D i a c h a s m i m o r p h a* VIERECK 1913

Distribution: Ethiopian, Nearctic, Oriental and Palearctic Region.

Valid species: 4.

Diachasmimorpha fullawayi (SILVESTRI 1914)

Diachasmimorpha fullawayi (SILVESTRI 1914): QUILICI, VINCENOT & FRANCK 2003: 129 (biol., Réunion), 154 (cat.), 156 (cat., biol.), 158 (cat., biol.).

Habitat: *Ceratitis capitata* (WIEDEMANN) (Diptera: Tephritidae).

Distribution and new records: Réunion – Mauritius: Pointe d'Esny 1 ♀ 23.09.2007 leg. A. Link (NHMW).

Known from the Ethiopian Region.

Introduced into Réunion for biological control and established. New to the fauna of Mauritius.

Diachasmimorpha insignis (GRANGER 1949)

Biosteres insignis nov.sp.: GRANGER 1949: 394 (key, descr. ♂ ♀, Madagascar), 395 (fig. 408).

Opius (Biosteres) insignis (GRANGER 1949): FISCHER 1963c: 723 (key), 730 (tax., descr. ♂ ♀, fig. 58, Madagascar).

Biosteres insignis GRANGER 1949: FISCHER 1971c: 25 (tax., cat.).

Biosteres insignis GRANGER 1949: PAPP 1985: 213 (cat.).

Biosteres (Chilotrichia) insignis GRANGER 1949: FISCHER 1987: 577 (key), 606 (descr. ♂ ♀, Madagascar), 607 (fig. 498).

Diachasmimorpha insignis (GRANGER 1949): WHARTON 1997: 14 (tax.), 33 (tax.).

Distribution: Madagascar: Prov. Toamasina: Andekaleka (Rogez).

***Diachasmimorpha longicaudata* (ASHMEAD 1905)**

Opius longicaudatus ASHMEAD 1905: BRÉNIERE 1965: 349 (biol., Madagascar not established).
Biosteres (Chilotrichia) longicaudatus ASHMEAD 1905: RAVAOMANARIVO-RAVELOSON & RAZAFIMAHATRATRA 1987: 24 (Madagascar).

Distribution: Madagascar: Prov. Antananarivo: Fenoarivo.

Known from the Oriental and Australian Region.

Introduced into Madagascar for biological control and established, but the introduction into Mauritius failed.

Genus *Fopius* WHARTON 1987

Distribution: Oriental and Palearctic Region.

Valid species: 5.

***Fopius arisanus* (SONAN 1932)**

Fopius arisanus (SONAN 1932): WHARTON 1999: 50 (table 1: tax.).

Fopius arisanus (SONAN 1932): QUILICI, VINCENOT & FRANCK 2003: 136 (biol., Réunion), 137 (photo 159), 154 (cat.).

Zusammenfassung

Die Unterfamilie Opiinae ist in der Madagassischen Unterregion derzeit mit neun Gattungen und 46 Arten vertreten. Folgende neue Kombinationen werden vorgeschlagen: *Psytalia infuscata* (GRANGER 1949), *P. subsulcata* (GRANGER 1949) und *Pseudorhinoplus variegatus* (GRANGER 1949). Neue Funddaten von *Diachasmimorpha fullawayi* (SILVESTRI 1914), *Fopius arisanus* (SONAN 1932), *Opius waterloti* GRANGER 1949, *Psytalia cosyrae* (WILKINSON 1927), *P. insignipennis* (GRANGER 1949), *P. sanctamariana* (FISCHER 1980) und *P. subsulcata* (GRANGER 1949) werden mitgeteilt.
