Erratum et Addendum

H. FERY

Recently, a paper on a few Hydradeephaga from the Persian Gulf region was published in this journal (FERY et al. 2012). Unfortunately, in the legend of one figure table the first two species names have been mixed up by mistake. This legend must be:

"Figs 13-15: Habitus of (13) *Hygrotus orthogrammus*, (14) *Hyphoporus solieri*, (15) *Canthydrus laetabilis*."

In the same paper *Glareadessus franzi* WEWALKA & BISTRÖM 1998 was reported from two new localities. Because the distribution as well as the life history of this species remain poorly known, a further record shall be added here which was unknown to the authors when preparing their manuscript. This record has been communicated recently by J. HÁJEK (NMPC, Národní muzeum, Prague, Czech Republic), who found a single male at a locality about 7 km east of the locality "Rudan stream" given in FERY et. al. (2012) and about 18 km west of the type locality of this species (Manoojān). The exact label data are: "Iran, 16.-17.IV.2000, Hormozgan Prov., 10 km E Dehbarez (27°27'N 57°19'E)", "Iran 2000, Czech Biological Expedition, J. Hájek & M. Mikát leg.", "Glareadessus franzi Wewalka & Biström, 1998, Jiří Hájek det. 2000, compared with the type in the NHM Vienna". The collecting site is a large wadi, which included at that time only a small meandering stream about one meter wide. The specimen was collected at the side of the wadi near an area where the stream disappeared under the ground, re-emerging two metres below.

Other Hydradeephaga collected in that stream were *Deronectes hendrichi* FERY & HOSSEINIE 1998, *Hydroglyphus hormuzensis* HÁJEK & BRANCUCCI 2011, *Laccophilus maindroni persicus* BRANCUCCI 1983, and *Dineutus indicus* AUBÉ 1838.
