Metopiinae (Hymenoptera: Ichneumonidae) from Bulgaria and related regions

Janko KOLAROV

A b s t r a c t. The newly discovered female of *Exochus hirsutus* TOLKANITZ is described and figured. Data of 40 Metopiinae species from Bulgaria and related regions are presented. Of them 19 species are new records to the Bulgarian fauna, 3 species new to Macedonia, 12 species new to Greece, 3 species new to Turkey and 1 species new to Iran (marked in the text by asterisk).

K e y w o r d s : Metopiinae, Ichneumonidae, Bulgaria, new records, description.

Introduction

Metopiinae is a medium-sized ichneumonid subfamily comprising 22 genera and about 660 species worldwide (YU & HORSTMANN 1997). They are koinobiont endoparasitoids of lepidopterous larvae, living usually in leaf rolls or folds on plants. Oviposition takes place into the host larva, but the adult emergence always occurs from the pupa. A key to the genera is given by TOWNES (1971).

The Bulgarian Metopiinae fauna is not well studied. The first reports were made by TSCHORBADJIEW (1925). Until now 49 species from Bulgaria were reported mainly by GREGOR (1933), ANGELOV & GEMANOV (1969), GERMANOV (1980) and KOLAROV (1984). In the present paper data for 40 species are given. Of them 19 species are new records to the Bulgarian fauna, 3 species new to Macedonia, 12 species new to Greece, 3 species new to Turkey and 1 species new to Iran. For the other species new localities are added. The newly discovered female of *Exochus hirsutus* TOLKANITZ is described and figured for the first time.

The dominant species are *Exochus suborbitalis* SCHMIEDEKNECHT and *E. mitratus* GRAVENHORST. Metopiinae are rare in collections, and many species in our investigation are represented by single specimens. The general distribution is mainly after YU et al. 2012.

Material and Method

Materials were collected by sweeping with a hand net and Malayse traps. The stuffing and taxonomocal identification of collected material was carried out in the University of

Plovdiv. Generally the taxonomical works of TOLKANITZ (1987, 2007) were used. The materials are preserved in the author's collection. The following abbreviation were used in the text:

BG - Bulgaria, GR - Greece, TR - Turkey, MC - Macedonia, I - Iran, H - Hungary.
