A catalogue of the family Rhopalosomatidae (Vespoidea) of the Malagasy subregion (Insecta: Hymenoptera)

Michael MADL

A b s t r a c t : In the Malagasy subregion the family Rhopalosomatidae, which is known only from the Madagascar, is represented by the genera *Olixon* CAMERON, 1887 (two species) and *Paniscomima* ENDERLEIN, 1904 (four species).

K e y w o r d s : Insecta, Hymenoptera, *Olixon*, *Paniscomima*, Madagascar.

Introduction

The family Rhopalosomatidae is known from all zoogeographical regions except the Palaearctic region. In the Malagasy subregion it occurs only on the island of Madagascar. The larvae are parasitoids of Orthoptera (Gryllidae), but no host records of the Malagasy species are known.

Until now, two species of the genus *Olixon* CAMERON, 1887 and four species of the genus *Paniscomima* ENDERLEIN, 1904 have been recorded from Madagascar.

How to use the catalogue

The systematic part of the catalogue is organized alphabetically. Misidentifications are marked with an asterisk (*). Only genera described from the Malagasy subregion are mentioned under synonyms and the number of valid species is also restricted to the Malagasy subregion.

The known records from Madagascar are listed province by province from North to South and old names or misspellings are in brackets.
