### Introduction

The large parasitic family Braconidae is poorly investigated in Gabon concerning faunal composition and biology. Hitherto only 26 species belonging to five subfamilies have been recorded. The subfamily Agathidinae is represented by four species, the subfamily Braconinae by 17 species, the subfamily Doryctinae by two species, the subfamily Euphorinae by one species and the subfamily Orgilinae by two species. The hosts of the species are unknown except *Aspidobracon pierrei* VAN ACHTERBERG, 1984 (Braconinae).
