

**Addition to**  
**„Revision of the genus *Amarygmus* DALMAN, 1823 and related genera. Part LVII“**  
**(Coleoptera: Tenebrionidae: Amarygmini)**

**Hans J. BREMER**

In BREMER 2010 *Sylvanoplonyx kabourecki* from Malaysia has been described, and the aedeagus has been figured. Unfortunately, at that time it was not possible to provide a figure of this remarkable species because the holotype was not accessible. In the meantime, the holotype has been deposited in the Hungarian Natural History Museum, Budapest.

A picture of this species has been taken by Mr. Tamás NÉMETH of the Hungarian Natural History Museum, and I thank Mr. NÉMETH and Dr. Ottó MERKL from the Hungarian Museum that they permit to publish it.

*Sylvanoplonyx kabourecki* BREMER, 2010: Habitus.

The abrupt bending and broadening of tibiae is certainly a character of sexual dimorphism.

BREMER, H. J. 2010: Revision of the genus *Amarygmus* DALMAN, 1823 and related genera. Part LVII. New species of *Amarygmus*, *Cephalamarygmus* and *Sylvanoplonyx* from the Malayan Peninsula and Sumatra (Coleoptera: Tenebrionidae: Amarygmini). – Mitteilungen der Münchner Entomologischen Gesellschaft **100**: 31-96.
