Corrigendum to the paper published in *Sydowia* 46(2): 247–256 (1994):

To our regret we overlooked a paper by G. A. Neish in *Can. J. Bot.* 65: 589–591 (1987) in which he neotypified *Fusarium tricinctum* with a specimen DAOM 194693, based on the living culture CBS 449.67. This strain was already regarded by Seemüller as most representative of the species. This represents a designation of an epitype and need not be superseded by our typification.
