

**Erratum: *Caudatispora biapiculata* sp. nov.,
Sydowia 50(2): 200**

In Sydowia 50(2): 200 the new species *Caudatispora biapiculata* Huhndorf et F. Fernández was not validly published, as the type collection was cited without mentioning the Holotype and the deposited herbarium acronym (F).

Here it is amended as follows:

***Caudatispora biapiculata* Huhndorf & F. Fernández, sp. nov. –
Figs. 1–14.**

Ascomata numerosa, ovoidea, 250–275 μm diametro, 250–350 μm alta, papillata, pagina ascomatis aspera, fasciculatus, stromati basali instructa. Paries ascomatis superficialis textura globosa, in sectione longitudinali 30–50 μm crassus, distriatus. Asci cylindracei vel clavati, 160–200 $\times$ 15–16.5 μm , breviter stipitati, octospori, biseriati vel triseriati. Ascosporae fusiformes extremitatibus apiculatis, 45–63(–72) $\times$ 6.2–8.4 μm , hyalinae vel pallide brunneae, interdum uniseptatae, terminalibus basalibus appendicibus praeditae.

Type. – UNITED STATES: Puerto Rico, Luquillo Mts., El Verde Research Area, 16-ha Grid, 18°19'0"N, 65°49'0"W, 380 m, *Prestoea* petiole, 14 Jan. 1996, S. M. Huhndorf 1873 (HOLOTYPE: F).
