# T R I C H O P T E R A   N E W S L E T T E R

No. 10                                  April    1983

*Dear Trichopterologist,*

*With this Number 10 we have a minor jubilee of the Trichoptera Newsletter. Contributions by colleagues from all over the world, and many letters, indicate to me that the Newsletter is accepted as a useful means of communication. I have every hope that it will continue this way, and will have more jubilees in the years ahead.*

*Ken Manuel has compiled the scattered information from past issues into a DIRECTORY OF TRICHOPTERA WORKERS which fills about half of this Number. I am really grateful to him for this work for which I would never have found the time.*

*John Morse tells me that preparations of the 4th Symposium in Clemson go well; there are now registrations from more than 30 colleagues outside North America, and from about 30 North Americans.*

*Henri Tachet informs me that he will invite the Trichopterists to Lyon, France, for the 5th Symposium in 1986.*

*It was a great pleasure for me that my 'Atlas of European Trichoptera' which represented more than ten years work was issued early this year. It is a book which may appear unusual in some respects. My intention was to produce a useful tool for everybody who works with caddisflies. It is planned to publish in the Newsletter additional facts which will keep the book abreast of new knowledge over the years. Please note the enclosed special offer by Dr.W.Junk b.v. Publishers which is valid until the end of July.*

*This Number should come to you just in time for the beginning of a new field season (at least in the Northern Hemisphere). Best wishes for your caddis hunting !*

                *Yours sincerely,*

                   *Hans Malicky*

COVER: Corsican caddis larvae: Thremma sardoum, Silonella aurata, Leptodrusus budtzi (from GIUDICELLI).
