Note.

I started collecting and identifying Caddisflies while still at school (about fifteen years ago) and continued the interest through University, where I used a survey of drift as the basis for an honours degree thesis. I have since maintained the interest strictly in my spare time. I am presently trying to compile a species list for the area where I live, and thus add to the other records for this part of Scotland. Having initially concentrated on identifying adults I am now starting to use the recent keys for larvae to try and identify a large backlog of larval material collected over the past fifteen years in the far north and northwest of Scotland where I formerly lived. This may take some time!

I hope this information may be of interest to others.

alandan O Joyce

Yours sincerely

OPUSCULA ZOOLOGICA FLUMINENSIA is a small (printing surface 10 x 16 cm), cheaply produced periodical, published in Switzerland and appearing at irregular intervals. Each paper represents a separate issue (4-40 pp. approx.), therefore production time usually does not exceed 6-10 weeks.

It accepts original research papers in all fields of entomology and invertebrate zoology, with the emphasis on systematics, description of new taxa, biogeography, ecology and behaviour. All manuscripts are refereed and the journal is covered by most of the major abstracting services.

Publication is open to all, and there are no page charges. Manuscripts, in one of the western congress languages, should be submitted in duplicate. A concise English abstract must precede the text. Illustrations should be mounted and labelled by the author. Extra costs for photographs (plates) requiring special quality of paper, of the artist (if figures are not submitted ready for the press), and costs of major alterations in the proofs will be charged.

All reprints are supplied with cover and should be ordered (50 or multiples thereof) along with the submission of the manuscript, or with the returned proofs. The price per 50 copies amounts to sFr 50.- for the first 4 pages, and an additional sFr 20.- for each subsequent 4-page unit. Authors ordering more than 200 copies and subscribers to the journal enjoy ardiscount.

50 reprints per title are supplied free to authors resident in non-convertible areas.

Manuscripts are to be sent to the Editors of Opuscula, S.I.O.Central Office, P.O.Box 256, NL-3720 AG BILTHOVEN, The Netherlands.

Annual subscription fees are fixed in accordance with the volume published, and usually do not exceed sFr 60.-

Subscription orders are to be sent to "Casa d'Uors", Postfach 324, CH-8896 FLUMSERBERG-GROSSBERG, Switzerland.

## A new Larva of the genus Ceraclea Stephens, 1829?

What is it? I think it is a species of Ceraclea. I found this larva in Paskeka River in Poland. Head and submentum golden yellow, pronotum pale straw with yellow band. No sclerotization of meso- and metadorsal tergites. Ninth abdominal tergite without sclerotization. Figs.: A, B: larval head, C: pronotum, D: mandible, E: case.
