

Über Originalien der geologischen Sammlungen des Basler Naturhistorischen Museums.

Von

Ed. Greppin.

Bei der im Jahre 1898 stattgefundenen Übersiedelung der geologischen Sammlungen in die neuen Lokalitäten des Basler Museums wurde die Gelegenheit benützt, das überaus reiche Material einer zeitgemässen Neuordnung zu unterwerfen.

Im Laufe dieser sehr umfangreichen Arbeiten zeigte sich die erfreuliche Thatsache, dass unsere geologischen Sammlungen, die speziell aus dem Juragebirge stammen, eine grosse Zahl von Fossilien enthalten, die von verschiedenen Forschern als Belegstücke zu Artentypen gewählt und in den diesbezüglichen Werken abgebildet worden sind.

Ich habe mir nun die Aufgabe gestellt, alle diese Originalien, die bekanntlich den Sammlungen stets einen sehr grossen Wert verleihen, zu Handen der vielen Publikationen, aus den Hunderten von Schiebladen herauszusuchen, mit der Absicht die Namen aller dieser Typen in den Verhandlungen der hiesigen naturforschenden Gesellschaft zu publizieren.

Es soll damit bezweckt werden, die Schätze, welche die geologischen Sammlungen des Basler Museums ent-

halten, einem weiteren Publikum bekannt zu geben. Dem Paläontologen kann eine solche Aufzeichnung ebenfalls gewisse Dienste leisten; denn es ist oft sehr wichtig zu erfahren, wo das eine oder das andere Original zu suchen ist.

Eine solche Publikation sind wir gewissermassen Ratsherrn Peter Merian schuldig, der mit treuer Hingabe während mehr als eines halben Jahrhunderts dafür gesorgt hat, dass das ältere Material nicht nur erhalten geblieben, sondern durch neues ganz bedeutend vermehrt worden ist, so dass die jüngere Generation noch für lange Zeit hinaus wird Nutzen daraus ziehen können.

Wie sehr Peter Merian für die Erhaltung der Basler naturhistorischen Sammlungen besorgt war, geht aus einer „Erklärung“ aus dem Jahre 1834 hervor, als es sich um die Teilung des Staats-Vermögens vom Kanton Basel handelte. Diese Erklärung ist von Peter Merian verfasst und von den damaligen Kommissions-Mitgliedern des naturwissenschaftlichen Museums unterschrieben. Wir lesen unter anderem: „Alle Geschenke und Legate werden nur unter dem bestimmten Vorbehalte gemacht und angenommen, dass sie *unabänderlich* und *unveräußerlich* in der *Stadt Basel* zu möglichst gemeinnützigm Gebrauche sollen aufgestellt bleiben. Hievon sind allein ausgenommen Doubletten und abgängige Stücke, deren Veräusserung jedoch nur zum Vorteile der Anstalt gestattet ist.“

„In allen möglichen Wechselfällen soll die Bedingung der Unentfremdbarkeit dieser Gegenstände von der Stadt Basel heilig und unverletzt gehalten werden, auch zur Wahrung dieser Bestimmung in keinem denkbaren Falle weder dem Staate, zu dem die Stadt Basel je-weilen gehören wird, noch der Stadt Basel selbst irgend

ein Opfer rechtmässig auferlegt werden können, so dass folglich eine jede Teilung, jede Auferlegung einer Auskaufssumme, jede zu diesem Zwecke vorgenommene Schatzung der aus Schenkungen und Legaten herrührenden Bestandteile der Sammlungen, sowie überhaupt jede Massregel ähnlicher Art als Raub und offensichtliche Gewaltthat zu betrachten wäre.

Diese Erklärung soll sowohl der Ehrw. Akademischen Regenz als dem löbl. Erziehungs-Kollegium zur Genehmigung vorgelegt werden und dem E. E. Stadtrat das Ansuchen gestellt werden, die vorstehende Erklärung zu Protokoll zu nehmen und zur Wahrung der darin enthaltenen Bestimmungen mitwirken zu wollen.“

Wenn wir das von Peter Merian während 55 Jahren geführte und von ihm selbst geschriebene Geschenkbuch durchgehen, so finden wir, dass dieser Gelehrte Jahr für Jahr die Sammlungen mit kleineren oder grösseren Suiten von Fossilien bedacht hat, und soll es uns daher nicht wundern, dass die Peter Merian'sche Sammlung im Laufe der Zeit ganz bedeutende Dimensionen annehmen musste. Durch seine Beziehungen mit allen bedeutenden Geologen des letzten Jahrhunderts wusste er sich auch ein ausserordentlich reiches, für paläontonische Arbeiten so wichtiges Vergleichsmaterial zu verschaffen.

Aus der Trias-, Jura- und Kreideformation allein liegen circa 300 Schiebladen vor, die eine Fläche von über 100 m² einnehmen.

Als Grundstock der Peter Merian'schen Sammlung haben wir offenbar die Sammlungen von Hieronymus d'Annone, von Heinrich Bavier, von Professor Joh. Jak. d'Annone und endlich von Alt Stadtrats-Präsidenten Hieronimus Bernoulli zu betrachten, Sammlungen die

in den Jahren 1768, 1777, 1806 und 1830 dem Basler Museum geschenkt wurden.

Die beiden erstgenannten Sammlungen haben Stoff zu dem bekannten Bruckner'schen Werke: *Versuch einer Beschreibung historischer und natürlicher Merkwürdigkeiten der Landschaft Basel*, 1748—1763. geliefert.

In dem bedeutenden Werke von Knorr und Walch erkennen wir eine grosse Zahl von Fossilien aus der Sammlung von Joh. Jak. d'Annone.

Über das Knorr und Walch'sche Werk sagt Zittel in seiner *Geschichte der Geologie und Paläontologie bis Ende des 19. Jahrhunderts* folgendes:

„Aus der meist rein descriptiven Litteratur dieser ganzen Periode (von den Anfängen der Versteinerungskunde bis Ende des 18. Jahrhunderts) ragt ein Werk durch Gelehrsamkeit, kritisches Urteil und historische Kenntnisse des Herausgebers, sowie durch herrliche Ausführung der Tafeln über alles andere hervor. Den vier Folioböänden der „Sammlung von Merkwürdigkeiten der Natur und Altertümer des Erdbodens,“ wovon der Nürnberger Sammler und Künstler Georg Wolfgang Knorr (geb. 1705, gest. 1761) den ersten, die übrigen nach Knorrs Ableben der Jenenser Professor J. C. J. Walch herausgab, hatte kein Land in jener Zeit etwas Ebenbürtiges zur Seite zu stellen.“

In neuerer Zeit haben die geologischen Sammlungen noch einen bedeutenden Zuwachs erhalten durch die Sammlungen von Cartier aus dem Solothurner Jura, von Gilliéron aus dem Neuenburger Jura und von Koby aus dem Rauracien des Berner Jura. Durch diese drei Sammlungen ist die Zahl der Originalien beinahe um das vierfache vermehrt worden.

In der Liste habe ich nun, um dem Ganzen mehr Übersicht zu geben, die Typen von ein und derselben

Publikation beisammen gelassen und die Werke selbst in einer chronologischen Reihenfolge geordnet.

Die Originalien-Sammlung besteht heute aus 1768 Stücken, sie sind in 24 Publikationen verteilt. Das älteste Original ist die schon oft erwähnte *Ophiura Gagnebini*, Merian. Dieses seltene Stück, welches wohl verdient einmal genau untersucht zu werden, ist von Abraham Gagnebin, diesem genialen Naturforscher, von welchem Thurmann im Jahre 1851 ein so vortreffliches Lebensbild gegeben hat, gesammelt worden. Es gehört wahrscheinlich Effingerschichten an, welche die Übergangszone zum Rauracien charakterisieren.

Bourguet gibt zuerst in seinem „*Traité des Pétrifications 1742*“ eine Abbildung dieses Originals; eine zweite finden wir in den *Acta helvetica*, Bd. 7 und endlich eine dritte in der oben erwähnten Thurmann'schen Biographie von Gagnebin.

Die Typen der älteren Autoren tragen keine Namen oder nur solche, die als Synonym einen Wert haben. Da wo ich es für gut fand, habe ich diese Namen in Klammern eingesetzt.

In der letzten Rubrik ist zu jedem Original das genaue geologische Alter angeführt und lasse ich zur Orientierung am Schlusse der Liste ein Profil folgen, welches im Grossen und Ganzen die stratigraphischen Verhältnisse im Juragebirge andeuten soll.
