

HYDRAENIDAE

(Coleoptera)

M.A. JÄCH

Abstract

Thirty-seven species and 4 genera of Hydraenidae from China are listed. A lectotype is designated for *Hydraena sauteri* d'ORCHYMONT. *Hydraena miyatakei* SATÔ and *Limnebius glabriventris* SHATROVSKII are recorded for the first time from China.

Key words: Coleoptera, Hydraenidae, China, check list

Introduction

The Hydraenidae is a cosmopolitan family of small beetles (ca. 1 - 3 mm long), which live in a variety of aquatic or semiaquatic habitats; a few genera are recorded to be fully terrestrial.

Phylogenetically, the Hydraenidae show close affinities with Hydrophiloidea and Staphylinoidea (BEUTEL 1994).

Currently, more than 20 genera and 1000 species are known, many new species and a few genera will be described in the future.

Most of these genera have a quite restricted distribution; only 3 (*Limnebius* LEACH, *Hydraena* KUGELANN and *Ochthebius* LEACH) are found on all continents.

Material

About 2000 hydraenid specimens were collected by the CWBS (deposited in the NMW and CASS) in the years 1992 - 1994. As the material has not been completely worked up it cannot be estimated how many species there are. However, only a few of these species are mentioned herein. The majority, all still unidentified, will be revised later.

Check list of Chinese Hydraenidae

Thirty-seven species are known from China. Twenty-two of these species were described by Zhelong [= Jillon = Chih-Lung] PU (1937, 1942, 1951a, 1951b, 1958).

Hydraena KUGELANN

About 500 species of *Hydraena* are known, most of which inhabit the western Palearctic Realm. Only 11 species are known from China. Many new species await description.

1. *Hydraena bispinosa* PU, 1951b

China: Guizhou, "Kweiyang [= Guiyang City]" (PU 1951b: 281, 1956: 302); Hunan, "Ichang [= ca. 50 km S of Chenzhou City, Yizhang County, Chenzhou Prefecture]" (PU 1951b: 281); ca. 20 km E Hengyang City, You Xian County, Xiangtan Prefecture (PU 1956: 302)

***Ochthebius* LEACH**

Almost 400 species of *Ochthebius* are known. They are grouped in several subgenera and species groups. Only 18 species are known to occur in China.

Ochthebius pusillus was recorded by SHATROVSKIY (1989: 263) from NE China. Although it is not impossible that this species occurs in western or northern parts of China, his records are probably based on *O. angusi* JÄCH.

Discussion

The genus *Neochthebius* d'ORCHYMONT, known from marine rock pools in Japan (1 species) and the USA (1 species) might also occur in suitable habitats in China.

Until now, Hydraenidae have been recorded from 13 Chinese regions only: Yünnan (10 spp.), Guizhou (6 spp.), Hunan (6 spp.), Jilin (5 spp.), Liaoning (5 spp.), Sichuan (5 spp.), Taiwan (4 spp.), Guangxi (3 spp.), Tibet (3 spp.), Beijing (2 spp.), Guangdong (2 spp.), Heilongjiang (2 spp.), Henan (1 sp.). Thus it is virtually impossible to draw any zoogeographical conclusions. The reason, why Hydraenidae have been collected so rarely is explained mainly by the fact that they are overlooked easily due to their small size and that generally they are not attracted by lights. Many species are vulnerable to habitat disturbances and have become rare nowadays.

It can be estimated that there are more than one hundred species occurring in China.

I am obliged to Dr. P. Chen and Prof. L. Ji for their valuable assistance. Thanks are due to K. Desender (ISNB) and L. Zerche (DEI) for sending the syntypes of *Hydraena sauteri*.

Zusammenfassung

37 Arten und 4 Gattungen der Familie aus China werden aufgelistet. Ein Lectotypus wird für *Hydraena sauteri* d'ORCHYMONT designiert. *Hydraena miyatakei* SATÔ und *Limnebius glabriventralis* SHATROVSKIY werden erstmals für China nachgewiesen.
