

Species nova generis Capsidarum *Allodapus* Fieb.

Descripta ab O. M. Reuter, Helsingforsiensi.

Allodapus Montandoni n. sp.

Fusco-ferrugineus, opacus, superne longe pallido-pilosus, abdome piceo, nitido; hemielytris oleo-micantibus, fascia media irregulari marginem lateralem haud attingente opacissima, corio macula triangulari mox pone basin, cum fasciola angusta clavi conjuncta, aliaque apicali transversa albis; antennis basin versus, tibiis basi et apicem versus pallidis. — Long. ♂ $3\frac{2}{5}$, ♀ $3\frac{1}{2}$ mm.

Patria: Moldavia: vallis Bertadensis (D. A. L. Montandon).

Ab *A. rufescente* H. Sch. capite, pronoto scutelloque magis opacis, hemielytris fascia media opacissima instructis, macula basali corii minus extensa distinctus. Corpus fusco-ferrugineum, opacum, longe erecte pallido-pilosum, abdomine piceo, nitido. Caput basi pronoti circiter $\frac{1}{4}$ angustius (forma brachyptera), vertice oculo paullo magis quam duplo (♂) vel circiter $2\frac{1}{3}$ (♀) lato. Rostrum apicem coxarum posticarum attingens. Antennae ferrugineae vel subfuscæ, articulo primo pallide luteo, basi fusca, secundo basin versus lutescente, quarto tertio circiter $\frac{1}{4}$ breviore. Pronotum formæ brachypterae basi longitudine vix latius, disco subhorizontali, postice transversim strigoso, lateribus fortiter sinuatis. Scutellum parte apicali transversim strigosum. Hemielytra formæ brachypterae tertiam apicalem partem abdominis attingentia (♀) vel paullo superantia (♂), apice versus suturam oblique truncata, cuneo membranaque haud discretis, fusco-ferruginea, oleo-micantia, sed fascia media irregulari marginem lateralem haud attingente opacissima, corio mox pone basin macula triangulari albida medium haud attingente, interne in clavum sat longe producta, apice macula albida transversali extrorsum paullo latiore. Pedes ferruginei, tibiis obscurioribus, sed basi et apicem versus pallidis.
