

bird and remaining portions of the egg-shell which I exhibit here to-night have been presented by Mrs. Walker to the trustees of the Australian Museum. The female is now sitting on six eggs, and five others have been placed in an incubator; the last egg laid is of a deep bluishgreen, perfectly smooth and free from granulation'. — Mr. Ogilby exhibited a very handsome Lizard (*Lygosoma* — *Homolepida* — *casuarinae*, D. & B.) from Wentworth Falls, and remarked that it was the largest species of the genus, exceeding even *Lygosoma* — *Hinulia* — *Lesueuri* in size; also that he considers it a scarce species; 2) a young specimen of *Hoplocephalus ornatus*, De Vis; 3) *Holocanthus tibicen*, C. V., a fish new to the Australian fauna, and apparently scarce everywhere, recently brought from Lord Howe Island by the Visiting Magistrate, Mr. Icely; Mr. Ogilby further remarked that in the small collection brought by that gentleman no less than seven species are hitherto unrecorded from the island, namely *Holocanthus tibicen*, *Chironemus marmoratus*, *Trachynotus Russellii*, *Brama rayi*, *Pegasus draco*, *Cristiceps australis*, and an *Ophichthys*. — Mr. Skuse exhibited specimens of a minute Dipterous fly, *Phytomyza* (sp. n.), bred from the leaf of *Clematis aristata*, obtained in the beginning of the present month by Mr. J. J. Fletcher. The larvae make long irregular white galleries beneath the upper cuticle of the leaf, where they undergo their metamorphoses. — Mr. Brazier exhibited the Mollusca trawled by Mr. Smithers off Merimbula, and *Crassatella pulchra*, Reeve, found by Mr. E. Richards, of Ballina, Richmond River.
