known limit, Mr. Quaife found it associated with Cystopelta Petterdi, Tate, and a mollusc doubtfully identified as Helicarion Verreauxi, Pfeiffer. These southern forms here assume a subalpine position. - Mr. North exhibited specimens of Ptilotis analoga, with nest and eggs, and Lamprococcux malayanus and eggs referred to in his paper. Also clutches of the following eggs taken near Sydney last season, each set containing in addition the egg of a different species of Cuckoo, viz., Ptilotis auricomis, with the egg of Cacomantis pallida; Acanthiza pusilla with egg of Cacomantis flabelliformis; Rhipidura albiscapa with egg of Cacomantis insperatus; Malurus cyaneus, with egg of Lamprococcyx basalis, and Geobasileus chrysorrhoea with egg of Lamprococcux plagosus. - Mr. North also drew attention to several species of rare birds at present in the George-street Markets, among which may be pointed out Poephila leucotis, Donacicola pectoralis, and Lophophaps plumifera, all captured in the neighbourhood of Croydon and Hughenden. Northern Queensland. — Mr. Hamilton showed specimens of rare or local butterflies (Casyapa beata, Hew., of Q, and Heteronympha mirifica, Butl.) from Illawarra. C. beata is apt to escape notice, being crepuscular in its habits. H. mirifica was seen in numbers wherever the brush vegetation occurs, but usually flying too high for capture. He also showed examples of the bees concerned in the fertilisation of Candollea, and drawings illustrative of his paper.

III. Personal-Notizen.

Dr. Erich Haase, welcher Bangkok in Kürze verläßt, bittet Sendungen an ihn nach Königsberg i. Pr., Zoologisches Museum, zu richten.
