

specimens of polyzoa and foraminifera, recently dredged in 111 fathoms, $12\frac{1}{2}$ miles to the east of Cape Byron, by Mr. Gerald Halligan, F.G.S. The exhibit seemed to show that a reef rock was in process of formation similar in character to the polyzoal limestone at Mount Gambier, S.A. — Mr. Gurney showed two specimens of the stridulating moth, *Hecatesia fenestrata*, Boisd., recently captured by him at Narrabeen; and he remarked that Mr. Waterhouse had also noticed it at Waverley. — Mr. Fletcher took the opportunity to point out that at the Society's Meeting on March 31st, 1897, he exhibited on behalf of Mr. C. T. Musson, specimens of a stridulating Agarista, *A. macleayi* Kock (Proceedings 1897, p. 44); and that recently, and quite accidentally, he had met with a much earlier record of the stridulating habit of this species, in Trans. Ent. Soc. N. S. Wales, i. Proc., p. XXVI. (Nov. 1863).

2. Deutsche Zoologische Gesellschaft.

Der Unterzeichnete ersucht, die Jahresbeiträge nicht an ihm, sondern an

Herrn Universitätsquästor Orbig in Gießen einzuzahlen.

Der Schriftführer
Prof. Dr. E. Korschelt.

III. Personal-Notizen.

Ernannt zum Director der Zoologischen Station in Helder (Holland):

Dr. H. C. Redeke,

an Stelle des Herrn Dr. P. P. C. Hoek, der als Generalsecretär des Centralausschusses für die Internationale Meeresforschung nach Kopenhagen ging.
