

vor. Aber schließlich — was haben solche Kleinlichkeiten für Bedeutung? Mir lag und liegt nur an den Tatsachen, nicht an Namen oder zufälliger Priorität um 3 Tage. Daher ist es mir auch vollkommen gleichgültig, ob man fernerhin zur Unterscheidung von der »*Sepiola*« das neue Genus »*Sepidium*«, »*Sepietta*«, oder meinetwegen auch »*Naefiola*« nennt.

20. These names are published for the information of all persons interested. They will be forwarded about September 1, 1912, to the International Commission on Zoological Nomenclature. A vote will be called on these names at the next meeting of the Commission, in the summer of 1913. Any objection to the proposed action should be filed with the undersigned, stating ground for the objection, not later than May 1, 1913.

21. It is self understood that the Secretary is obliged to base many references upon the authority of specialists in the various groups. In doing so it is very probable that he may permit some errors to creep into the "to be rejected" list and that later evidence may show that certain of the names should not be rejected. Any name rejected can of course be reconsidered when it is shown that the premises before the Commission are erroneous. The Commission can not possibly undertake to verify every reference in its preliminary work, but must accept the premises available in special works or as submitted by specialists. The "rejected" list, therefore, is to be construed as a statement to authors that the names in question are given by various authors as absolute homonyms, and that the Commission, therefore, will not consider them,

at least for the present, unless evidence is presented that the premises before the Commission are erroneous.

The cordial cooperation of all zoologists is invited in this attempt to carry out what seems to be a practical plan of finding out just where the various groups stand in respect to nomenclature and in this effort to solve a very complicated subject.

C. W. Stiles,
Secretary International Commission on Zoological Nomenclature.

Berichtigung.

In der Mitteilung über die Auffindung des Springfrosches (*Rana agilis*) im Südharz, Zool. Anz. Bd. XL. S. 254, lies statt Linz a. Donau Linz a. Rhein! Linz a. Donau ist allerdings auch Fundort für *R. agilis*, aber bei weitem nicht der nördlichste!

Dr. Wolterstorff.

In meinem Artikel (S. 400—416) Nr. 13, Bd. XL des »Zool. Anzeigers« sind einige Satzfehler zu verbessern:

S. 407 in der Fußnote (9) muß es Fakta (anstatt Faktoren) heißen.

S. 412. Zu dieser Seite gehört die Fußnote (16) auf S. 413. Die korrespondierende Nummer 15 im Text (Zeile 19 v. u.) ist in eine 16 zu verwandeln.

S. 413 (Zeile 11 v. o.) steht übereinstimmten, anstatt übereinstimmt.
